I. Executive Summary

Mossimo is a clothing retail brand distributed within the Philippines under its licensee, Promark Industries, Inc. (PII). The brand serves contemporary consumers who lead active lifestyles, priding itself as one of the premier streetwear labels. Mossimo releases seasonal collections in the order of Summer, Fall, and Holiday. Each catalogue collection has its own unique marketing campaign which follows an overarching theme that changes annually.

This marketing plan aims to increase Mossimo's brand awareness and consumer engagement through a mix of traditional and modern marketing strategies. In order to achieve the paper's objectives, the data collected from the Usage, Attitude, and Image survey was utilized in strategizing a one-year campaign proposal that accurately reflects the target audience's preferences and shopping habits. Additionally, two Focus Group Discussions were conducted to act as further evidence for the suggested implementation.

The proposed plan contains suggestions for product innovation such as the FlexiFit collection, as well as improvements to Mossimo's current digital and physical marketing strategies. It creates a solution to their current problem of having a convoluted brand image, embracing its flexibility to cater to multiple groups of consumers. The implementation follows the AIDA model in solving the problem.

II. Scope and Limitations

This marketing plan aims to reinforce the recent brand refresh of Mossimo Philippines, further building up its brand image amongst Filipinos. By utilizing a mix of digital marketing, visual merchandising, and traditional advertising, the proposal broadens the scope of Mossimo's reach to encompass the entirety of the Philippines rather than solely focusing on Metro Manila. The marketing plan prioritizes the centralization of marketing efforts for the three "seasons" that Mossimo clothing lines follow, namely: the Summer, Fall, and Holiday collections. A Usage, Attitude, and Image (UAI) Survey was employed to collect data from respondents primarily aged 18 to 34, who are classified as older Generation Z (Gen Z) and younger Millennials, with income brackets of middle to upper middle. Responses from participants in older age groups and different socioeconomic classes were also accepted to have a wider view of the brand, as they have been Mossimo's most frequent buyers in the past years. Focus group discussions (FGDs) with respondents of the same demographics were conducted to derive

the current perception of Gen Z on Mossimo's latest marketing campaign entitled "New Days" as well as to find other motivators the brand can utilize in becoming more appealing to its target market.

Promark Industries Inc. (PII) reserves the right to make changes to the brand's designs, quality, store concepts, advertising, marketing, and brand image as Mossimo's official licensee. This includes the execution of the current brand refresh with the use of a new logo. This license also allows the creation of Philippine-exclusive designs and brand partnerships, permitting the entity to alter the Mossimo branding to fit the local consumer base. The distribution agreement between PII and Mossimo is strictly confidential, thus, it will not be elaborated on in the proposal. However, it is to be noted that the old logo of the brand must still be retained in present and future campaigns, alongside the use of the new logo. The scope of the campaign is also limited to the Mossimo adult line, and does not apply to the Mossimo Kids brand or any of its other offers like swimwear or eyewear. Although Mossibear may be mentioned in this proposal, it will only be under the contexts of its usage as the brand mascot within merchandise for the adult collection. Other marketing materials that may be included in the proposal include store layout visualization, product packaging mock-ups, and PR kit samples.

III. Current Marketing Strategies

A. Industry Study

Overview of the Study

The apparel and footwear industry continues to thrive as one of the fastest-growing sectors, as the population in cities increases, evolving consumer trends, and the refinement of e-commerce platforms that boost consumer spending. In 2024, the retail value of the industry reached an amount of ₱686.7 billion, wherein the apparel sales accounted for 80%, while footwear accounted for 20%. The growth is projected to continue, as the market is still expected to grow with a promising rate of 9.2% per year. The "Others" category represents a significant 82.8% of the total market, powered by smaller, independent brands, proving that there's a huge world of fashion beyond the global giants. The Philippine apparel and footwear industry continues to grow, driven by rising urbanization and the expansion of e-commerce, with women's apparel remaining as the dominant segment. However, consumer behavior is shifting between mindful, value-focused shopping and fast-fashion-driven overconsumption influenced by rapid trend cycles on social media.

Market Composition

Mossimo Philippines is a retail brand that falls under the Apparel and Footwear Industry. As managed by the sole distributor and licensee of the brand, Promark Industries, Inc. (PII), Mossimo operates its own retail stores, serving as the primary retailer and distributor of the brand's products. As granted by its license to operate under PII, Mossimo designs, manufactures, markets and sells its products to end consumers.

The Apparel and Footwear Industry in the Philippines is primarily led by the brand Uniqlo which is operated by, Fast Retailing Philippines Inc., with a market share of 4.1%, followed by the brands Nike and H&M, each having a market share of 1.8% and 1.6%, respectively. Mossimo PH falls under the “Others” category in terms of market share, a category that encompasses 82.8% of the market (Euromonitor, 2024). These brands are typically found in major shopping destinations, with the continuous expansion of retail stores that can accommodate shoppers looking to shop in apparel and footwear stores.

Given the increasing urbanization in the country as people move to the cities and populate metropolitan areas to find better jobs and lifestyles, the apparel and footwear industry is driven to adapt to high demands and inflow of people into retail centers (“Philippines Apparel and Footwear Market,” 2024). Furthermore, trends and a varied range of fashion preferences also influence the industry, becoming markers for demand amongst competition. These may also include the increasing interest of consumers in ethical and sustainable practices, particularly in the fashion industry, as consumers increasingly seek out eco-friendly apparel.

Acting as regulatory bodies, the Department of Trade and Industry (DTI), the Intellectual Property Office of the Philippines (IPOPHL), and Local Government Units (LGUs) are some of the government agencies responsible for controlling the apparel and footwear industry in the Philippines. Through the Consumer Protection and Advocacy Bureau (CPAB), the DTI regulates trade practices in the country, ensuring the protection of consumers’ rights and the firms’ compliance with market regulations (Department of Budget and Management, 2007). IPOPHL on the other hand administers and implements state policies related to intellectual property, ensuring the use and regulation of patents, trademarks, copyrights and others (Mandate &

Function | IPOPHL, 2020). This ensures that designs on clothing apparel adhere to trademark standards. Lastly, Local Government Units regulate apparel businesses by issuing business licenses such as mayor’s permit or business permits that secure a firm’s compliance with regulations as regards to business operations (“Local Government Unit Registration in the Philippines,” n.d.).

Market Size

As per Euromonitor International (2024), the overall retail value of the Apparel and Footwear market in the Philippines is ₱686.7 billion. Apparel and clothing alone was valued at ₱538.3 billion. Meanwhile, footwear was valued ₱148.4 billion. Based on the projections of Euromonitor (2024), the most promising industries will grow by 9.2% a year, mainly due to factors such as the rise in consumer spending and demand, changes in consumer trends, inclination towards urban lifestyles, and the drastic shift of the shopping industry towards e-commerce and digital retail trends. With 33% of total sales channels being clothing and shoes sold at full-price, the retail non-grocery sector shows dominance in the Philippine retail due to consistent demand in apparel and footwear. It can be inferred from the 17.7% retail value of e-commerce that customer buying behavior is increasingly shifting to get a larger weightage online.

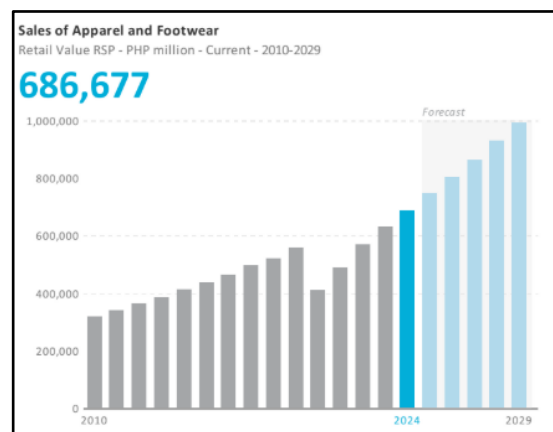

Figure #1: Sales of Apparel and Footwear (Retail Value RSP - PHP million - Current 2010-2029)

Apparel and footwear are the most preferred products to buy online, according to the study of Payments & Commerce Market Intelligence (PCMI) (2024) on the profile of the Filipino online shopper. Their average e-commerce spend per capita was valued at \$302 USD in 2025. With this, there are aspects in this large and growing market that have scope for investments. For example, in the clothing and casual wear categories, middle-class urban consumers typically

looked for trendy clothes, which are closely integrated with what we call ‘fast fashion’ (Laster, 2022), especially on digital channels. The growing market share of global fast fashion merchants, such as Uniqlo, H&M, and Zara, strengthens the export sector for involved nations, as they strategically integrate physical retail and digital channels to distribute products.

Market Segments

Apparel Industry Market Segments		
Primary Segments		
Price ● Luxury ● Premium ● Mass Market	End User Demographics ● Men’s wear ● Women’s wear ● Children’s wear ● Unisex	
Other Segments		
Fabric Type ● Synthetic Fibers ● Natural Fibers ● Blended Fibers ● Recycled textiles ● Smart textiles	Function ● Activewear ● Formal wear ● Casual wear ● Lounge wear ● Innerwear ● Ethnic wear ● Specialty Gear ● Swimwear	Distribution Channel ● Physical Distribution ● Online Distribution

Table #1. Apparel Industry Market Segments

The apparel industry is primarily categorized by price and end-user demographics. These segments funnel out into other categories based on fabric type, function, and distribution channels. A report on the apparel market shows that the industry is mostly driven by the mass market segment. This is due to the inclusion of fast-fashion brands within the category, which most consumers lean towards when choosing to purchase apparel. However, with consumer interest for sustainability steadily rising, more brands are eyeing to target the recycled textiles and smart textiles segment (Maximize Market Research Pvt Ltd, 2025).

Usership Patterns/ Significant Buying Habits

In the Philippines, the apparel and footwear industry is primarily dominated by the women’s segment that has a wider assortment of products, designs, and options in comparison to the men’s segment (“Philippines Apparel and Footwear Market,” 2024). With the growing

population of tech-savvy mobile users, e-commerce and online shopping has become increasingly popular because of its ease in completing transactions. A study conducted by Agile Data Solutions Inc. in the year 2023 reported 41% of the survey respondents still preferred shopping in stores and viewed online shopping as an alternative, not a complete replacement of physical stores (Pinaroc, 2023). This can be attributed to factors of trust and savings when it comes to online shopping behaviors. Online shoppers usually exercise an extra layer of precaution when shopping online to protect themselves from scams and inauthentic products. From the same study, 71% of the respondents were found to prefer cash on delivery as the primary method for online shopping because of the lack of trust they have that the product delivered is authentic and true to the description. This shows how shoppers value product quality and authenticity when shopping for products.

Furthermore, shoppers in the post-pandemic era may be described as more frugal, minimalist, or mindful spenders when it comes to purchasing apparel. A study conducted by Synergy Marketing Research in 2025 revealed that 63% of the respondents were consciously thinking about reducing their personal consumption and moving towards habits of underconsumption. This is not to say that consumers would like to spend less, but that they place great emphasis on durability, maximizing a product's usage, reducing the frequency of replacing a product, and overall are looking for better quality alternatives (*Probing the mindful Filipino market*, 2025). That being said, most conscious consumers prefer to stay within their allocated budget when purchasing new clothing items, as well as finding the best deals for them to save money.

In the advent of sustainability, thrift shopping has become more popular among consumers, particularly those who value sustainability and value for money. Thrifting has become popular amidst the growing preference for uniqueness and individuality, where any item found in a thrift store or “*ukay-ukay*” is typically one out of one and is not easily found. In particular with Gen Z shoppers, Desiderio of PhilStar stated that this generation of shoppers has great preference for uniqueness and rejecting labels. However, they have minimal interest in

spending more for environmentally responsible products, fueling the interest in thrifting for cheaper (2024).

On the other side of the spectrum would be consumers that subscribe to the habits of constantly buying apparel and rapidly discarding them at the same time. Another factor that influences buying habits of consumers in the Philippines is what is deemed as “in” as portrayed on social media. Through the platform TikTok and its hypervisibility, the trend cycle is accelerating quickly, giving rise to microtrends that support fast fashion practices. Overconsumption is still a main problem, given that fashion changes more rapidly. People get excited when purchasing trendy items, so they repeat those actions to create the same feeling, forming a continuous habit (Huber, 2022).

Market Motivators

Apparel, or clothing, is not just a piece of fabric wrapped around one’s body. It is a practical necessity for protection and comfort, as well as a tool for non-verbal communication that tells a person's identity, social status, and personality (TextileIndustry, n.d.). However, those are just the basic fundamental motivations behind why people purchase clothing. Nowadays, consumer behavior extends beyond traditional motivations. Lifestyles, cultures, and values change over time, shaping how and why consumers choose the apparel they buy and use. In particular, major factors influencing modern consumer behavior are as follows:

1. Digital and Social Media Influence

The prevalence of digital and social media in today's society has altered people's everyday lives. It has been established as a successful communication tool, not only by making it simpler for people to communicate with one another but also by becoming an essential platform for information gathering and sharing (Appel et al., 2020). In response to this, apparel brands adjusted their communication strategies, making use of what social media can offer. Brands use influencer and celebrity endorsements, user-generated content, targeted advertising across all platforms, and product reviews to shape consumer preferences. They also streamlined the purchasing process and made it easily accessible for consumers through in-app checkout and

shoppable links. This way, apparel brands influence consumer interest, guide purchase decisions, and strengthen brand loyalty.

2. Urbanization

The fast-paced life in urban cities with heightened exposure to new trends, changes fashion from a necessity to a representation of status, identity, and individuality. That change increases the demand for fast fashion, since it meets the urban social needs, such as convenience and affordability, determined by a rapid turnover of trends (Ann Mary & Ahmad, 2023). In response, apparel brands diversify their product offerings and modify their identity to appeal to different income brackets and demographics. They also create immersive in-store experiences and ensure a seamless customer experience across all touchpoints, using omnichannel strategies.

Growth/Decline Patterns

In the Philippines, the growth and decline trends of the apparel and footwear industry have been steadily rising since the significant dip in retail value growth around 2021. Due to the nationwide lockdown, retail sales of clothing and footwear experienced a significant slump, falling into the negative 20-30% range in value (Roberts, 2021). Since then, the industry has been rising towards the 2024 year mark (valued PHP 133.9 B) and is forecasted to remain consistently positive in the following years to come, as shoppers in the Philippines continue to purchase apparel and footwear. With this, the post-pandemic lifestyle has become prominent, including the resumption of in-store purchases, shopping trends, and outings, as well as the habit of spending on lifestyle goods, all of which drive the rise.

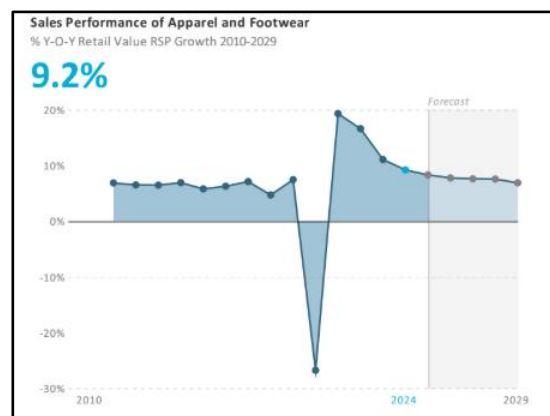

Figure #2: Sales Performance of Apparel and Footwear (Retail Value RSP Growth 2010-2029)

Additionally, the industry was aided by the wide presence of online shopping and e-commerce, as can be observed in the figure above. The industry's value surged to 20% in 2021, where the Philippine market frequently made use of digital channels to shop. As stated in Tila's study on E-commerce in the Philippines (2025), the nation's e-commerce market has grown by 400%, exhibiting how Philippines has the world's second-fastest-growing e-commerce market (Tila, 2025). As stated in the study, the Philippines' overall e-commerce market size was valued at USD\$28 billion, with the market set to expand at a 13% Compound Annual Growth Rate (CAGR) in the years 2024-2027 (Payments & Commerce Market Intelligence, 2024). Furthermore, the Philippines' online trade market was set to reach US\$40.5 billion in 2027 (Payments & Commerce Market Intelligence, 2024).

PESTLE Analysis

1. Political

Patenting Practices

Government agencies have shown interest in a more organized patenting approach to prepare the Philippines for the rising competitiveness within the global fashion industry. An innovation strategy developed by the Philippine Textile Research Institute (PTRI) and the IP Office of the Philippines (IPOPHIL) is changing how intellectual property rights are being practiced locally, protecting both the designs and the research that comes with innovating garments production. The initiative currently prioritizes the protection of local weavers, shoemakers and designers but is foreseen to contribute to the entire industry once regularized (Gov't, Industry Bet on IP to Revitalize PH Textile, Fashion | IPOPHIL, 2023). Improving patenting across the country provides additional protection for apparel designs, making it more difficult to sell replicated or counterfeit items.

Trade Agreements

The Philippines currently has access to trade agreements that lower tariffs, allowing for cheaper imports and exports. In particular, it has access to ASEAN trade agreements that allow it to work smoothly with countries like China, Japan, and South Korea ("Philippines - Trade Agreements," 2024). The government is presently lobbying an agreement with the European

Union to assist Filipino brands with expanding into the European market (Pascual, 2025). With greater access to international suppliers and retailers, players can utilize the global value chain in producing their goods. However, as the apparel industry grows with more players, they may find more suitable manufacturers from different countries for their needs.

2. Economic

Ongoing Inflationary Pressures

In the last quarter of the year 2024, the Philippines had a moderate growth in gross domestic product, an indicator of the country lagging behind the progress of some ASEAN neighbors (*“External Pressure Remains”*, 2025). The country experienced the weight of global demand uncertainties and the potential disadvantages of global tariff retaliation. Inflation in 2022 reached 5.8% before moderating to 3.2% in 2024, aligning with the shifts in commodity prices internationally (Tsang, 2025). Despite the fluctuations of the Philippine peso, it sustains modest impacts, and is projected to remain volatile and market-driven in the year 2025, given that foreign exchange interventions by the Bangko Sentral ng Pilipinas (BSP) are strategic in allowing the peso to act as a shock absorber of the economy.

High Production Costs

The Philippines as a player in the global apparel industry holds an important role as one of the key exporters to major markets globally, such as the United States, Canada, and the European Union. However, manufacturing and production costs in the Philippines in comparison to neighboring countries are 15% higher, making the country less attractive and competitive in the apparel manufacturing industry (Deepwear, 2025). One of the primary drivers of the high production cost in the garment industry in the Philippines is the cost of electricity. Electricity costs in the Philippines are said to be 50% more expensive than Vietnam, 30% more expensive than Thailand, and 40% more expensive than that of Indonesia (Monzon, 2022). The high electricity costs in the country make local manufacturers unable to directly compete with other neighboring countries that have lower electricity costs, especially in an industry that is dependent on technology. Because of this, apparel brands choose to outsource manufacturers of textile products internationally to cut down on production costs.

3. Social

Consumer Trends

With the growth of the global fashion industry that garners great interest and attention, global brands and fashion items have become more well known in the Philippines. With widespread access to social media that keeps the trend cycle churning quickly, microtrends and different consumer-dictated trends influence the demand for different clothing items. Among the trends on social media, some that have remained relevant to consumers are the following: (1) minimalist, clean girl fashion, (2) cottagecore aesthetic, (3) Y2K aesthetic, (4) old money aesthetic (Maran, 2025). From these trends, there is a clear connection between fashion and lifestyle aesthetics, creating a stronger drive for the consumption of fashion pieces that fall under those aesthetics. When fashion items become trending, they are deemed as “must-have items” that are “in” at the moment, creating the fear of missing out among social media users. This creates a cycle for consumers that enter the mindset that the only way they can keep up with the trends is to keep buying into fast fashion trends. As stated by Atkins of Tower, The Masters School, the negative effects of the fast fashion industry are well documented with regard to its effects on the environment, however, the substantial influence of Tiktok glorifies and romanticizes the idea behind overconsumption (2023).

Fashion Bloggers and Peer Influence

In the past few years that social media and technology have developed, bloggers and influencers have been provided with a platform to reach a wider audience, both locally and internationally. A research conducted in 2023 examined the influence that fashion bloggers and influencers had on consumer behavior, reporting that 80% of its respondents learned about new brands through social media. Approximately 75% of them purchased a product because of the recommendation of a fashion blogger or influencer on social media (Dhillon, 2023). The results of the aforementioned research revealed the impact of fashion bloggers and influencers on audiences’ fashion preferences and brand awareness.

Additionally, peer influence plays a role in influencing consumer behavior, given that peers are one of the primary sources in spreading information about different trends and style

preferences. A research that looked into the role of peers in influencing purchasing decisions among teenagers revealed that consumers, particularly teens, are motivated by their peers when making purchasing decisions because of how peers perceive brands or styles (Bahari et al., 2025).

4. Technological

E-Commerce Platforms

With increased internet penetration in the Philippines, and improved internet infrastructure, online shopping platforms have become more promising in the country. According to the International Trade Administration, the top e-commerce platforms in the Philippines are Shopee, Lazada, Zalora, and BeautyMNL (2024). The Covid-19 pandemic had dramatically increased e-commerce demand, pushing the Philippines to reach a record high of 159 million mobile subscribers and users. Another platform that is evolving in the digital economy is TikTok Shop, which has solidified its position through its ability to connect sellers and buyers via live selling. As a result, the fashion and cosmetics industries in the Philippines have experienced significant growth from the ability of e-commerce platforms to make businesses more accessible and visible to consumers (*"Philippines E-Commerce Industry,"* 2023).

Cashless Payment Systems

The global financial landscape has significantly adapted digital and cashless payment options, influencing the Philippine population to do the same. Traditionally reliant on cash transactions, the country is seen to have shifted towards the cashless trend, subscribing to the use of different mobile wallets and payment platforms such as GCash, PayaMaya, InstaPay and PESOnet among others (Relampagos, 2024). Digital payment platforms are more attractive to consumers because of its convenience and ease in conducting transactions. The safety of not carrying big amounts of cash when conducting business makes it appealing as well. This has allowed for smoother transactions on e-commerce platforms that allow consumers to pay sellers with the click of a button.

5. Legal

Garment Manufacturing Accreditation

The Philippines is well-known for its cheap manufacturing costs, especially within the

apparel industry. In 2017, the infamy of the country's sweatshops increased to a point where the Department of Trade and Industry (DTI) and the Department of Labor and Employment (DOLE) released orders for proper accreditation of garment firms. This was done to adhere to international labor standards, which cover fair wages and company benefits (Philstar, 2017). Although the department order has already been issued, the likelihood of garment manufacturers operating outside of legal standards is still quite high. In addition, there are micro-factories that may be able to bypass certain requirements. These garment operators may be a threat to the credibility of brands in the fashion industry, specifically those who have established names under the apparel and footwear category, should they be found to be working with them.

Wage Hikes

As the cost of living increases, people find it difficult to live within the means of their current wages. Due to this, the regional wage board has approved a Php 50 increase in the Philippine minimum wage, bringing it up to Php 695 from Php 645 for private sector workers (Cabalza, 2025). With the back-to-back wage hikes that the country has seen in recent years, it seems that changes to the minimum wage will become a common occurrence. This could slow operations within the industry as more clothing manufacturers adjust to rising costs. This is especially true for brands that have their own manufacturing and distribution processes. Companies may have to begin sourcing labor overseas to keep up with their current pricing strategies, lest they find themselves having to change their own retail prices.

6. Environmental

Introduction to Circular Fashion

The amount of textile waste that the Philippines produces has urged leading local brand Bayo Manila Inc. to partner with the Department of Science and Technology - Philippine Textile Research Institute in developing the Textile Revitalized (TexRev) Project. The TexRev Project aims to practice circular fashion, recycling old fabrics and turning them into usable textiles for apparel manufacturers. Its main benefits include lessening brands' carbon footprint and opening up more opportunities to target environmentally-conscious consumers (Realino, 2025). Considering that major international players like H&M and Zara have incorporated sustainable

fashion lines into their product offerings, brands can follow suit in an effort to capture previously untapped market segments. Participating in the TexRev Project would also broaden their list of fabric suppliers, lessening their reliance on imported raw goods.

Destructive Climate Change

Due to climate change, Philippine weather has been difficult to predict. The onslaught of typhoons and the natural “rainy season” that the country experiences has brought about economic challenges, such as the reduction of up to 7% in household incomes (Climate Analytics, 2024). While most provincial residents find their livelihoods in danger due to climate change, those who reside within Metro Manila face difficulties with infrastructure damage and road closures (Atienza, 2024). If the economy continues to drop due to climate change issues, consumers may struggle or opt not to purchase more apparel.

Porter’s Five Forces

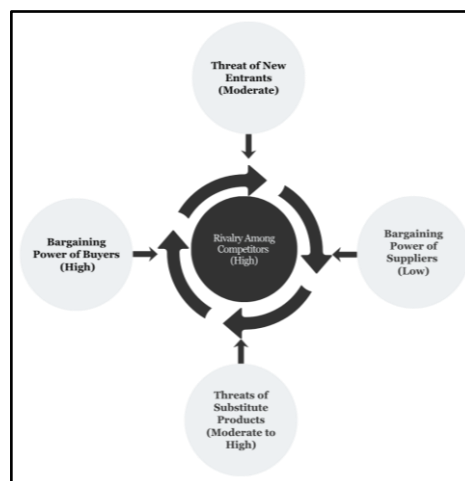

Figure #3: Porters Five Forces Analysis of Mossimo Philippines

1. Threat of New Entrants (Moderate)

Entering the apparel industry presents considerable challenges in the Philippines, as the market is mainly controlled by influential local brands like Bench and Penshoppe alongside global retailers such as Uniqlo and H&M. These brands have high customer loyalty and possess significant financial resources, making it difficult for new entrants. In addition, the initial capital investments required for equipment, facilities, and inventories in the garment manufacturing sector in the Philippines are expensive. These investments, combined with a cost disadvantage compared to competitor countries like Vietnam and Bangladesh, reduce the appeal of large-scale

investments in this industry. According to Deepwear (2025), the free-on-board (FOB) price of Philippine garments is 15% higher than that of the aforementioned countries as of March 2025.

However, the growth of online shopping has made it simpler and cheaper for new businesses to start selling clothes online instead of opening physical stores. Studies show that 76% of internet users in the Philippines buy products online, showing that there is a big demand for online shopping (Banera et al., 2022). This allows businesses to reach more customers than they could with a regular store. Also, recent changes to the Retail Trade Liberalization Act have made it easier for foreign companies to open stores in the country by reducing the investment required, resulting in increased competition for local brands (Ochave, 2023).

Overall, while joining the apparel industry has its risks and difficulties, the ever-changing digital landscape and recent laws are creating a more flexible space. This could help new businesses get started, leading to a *moderate* chance of new competitors to enter the market.

2. Bargaining Power of Buyers (High)

Consumers hold considerable power in the apparel industry in numerous ways. In the current landscape, online shopping and social commerce are two of the crucial tools for the industry, projected to generate \$2.9 trillion in sales by 2026 (DataFeedWatch, 2025). These platforms have transformed how buyers interact with brands, providing convenience to shop, access to product information, pricing, and customer reviews. As a result, consumers have all the relevant information they need to compare options, seek the best deals, and make more informed purchasing decisions. Moreover, switching costs are minimal due to the abundance of online and retail apparel brands that offer undifferentiated products at comparable prices. Although some customers develop brand loyalty, it is often fragile. Inferior product quality, product unavailability, service failure, stressful store atmosphere, and high prices are some of the factors that influence customers to switch brands (Wang and Xiao, 2022).

All these conditions indicate that buyers have *high* bargaining power in the market, compelling brands to remain competitive by continuously innovating, differentiating, and maintaining customer satisfaction.

3. Bargaining Power of Suppliers (Low)

Apparel manufacturers operate with a significant advantage over their raw material suppliers in the Philippines because the industry is reliant on global sourcing and its buyers hold great market power. With the domestic textile sector unable to meet the high volume and low-cost demands of large manufacturers, companies depend heavily on imports (Deepwear, 2025). Reports indicate that a significant majority of fibers are sourced internationally from countries across Asia, such as China and India (Espiritu, 2025). This high import dependency provides manufacturers with access to a large and competitive international market, offering a wide array of standardized inputs such as cotton and polyester. As a result, manufacturers face minimal costs when switching suppliers, since these materials are largely undifferentiated and global logistics are well-established. This leverage is further increased by the substantial purchasing volumes of both local and international apparel brands, which grant them significant buyer dominance. Given the apparel industry's inherent price sensitivity and high level of competition, this market power is translated into constant pressure on suppliers to maintain low costs and competitive pricing (Chua, 2024).

Taken together, these factors culminate in a market dynamic where the bargaining power of suppliers is *low*.

4. Threats of Substitute Products (Moderate to High)

The apparel and footwear industry comprises various brands that deliver products to meet different consumer needs, as each brand establishes itself in specific market segments. Brands in the market use competitive benchmarking to evaluate their current performance and market position relative to competitors. People make their decisions about clothing and footwear purchases after evaluating multiple elements, which include product quality, product pricing, product assortment, and product design. The competing brands provide options which consumers use to select products that best match their essential needs according to Abbas et al. 2020.

The apparel and footwear industry experiences Moderate to High substitution threats because thrifted fashion and online clothing rental services and sustainable local brands continue to grow in popularity. Filipino Gen Z consumers perceive thrift stores as sources of affordable, high-quality clothing (Bengzon et al., 2020), while rental brands such as Continuiti, Vestido

Manila, and RNT Wardrobe attract young professionals seeking temporary access to high-end fashion (Lang et al., 2025). Local brands such as Bayo Tela R2R and Anthill develop sustainable solutions that address environmental issues that occur because the fashion industry remains one of the main sources of pollution, according to Realino 2025. The substitutes available in the market usually require higher costs, deliver fewer style choices, and build limited brand recognition, which makes them inferior to fast fashion brands that deliver budget-friendly, easily obtainable, and extensive product selections at the same price points, according to Perez et al. 2022. The industry faces a Moderate to High risk from substitutes because customers prefer high-quality products at low prices which they can easily obtain while sustainability demands create more substitution options.

5. Rivalry Among Competitors (High)

The apparel and footwear industry, particularly in fast fashion, is defined by intense rivalry as brands compete through fleeting trends and seasonal lines. Competition escalates when players are numerous and balanced, demand drops, or price discounting prevails (Rizaldy & Supaiansyah, 2023). The Philippine market is notably fragmented; Euromonitor (2024) reports that while Uniqlo leads with a 4.1% retail value share, followed by Nike (1.8%), Suyen Corp. (1.8%), and H&M (1.6%), a significant 80.7% of the market is split among smaller competitors. This fragmentation makes brand loyalty difficult to sustain and limits any single firm's dominance. Furthermore, the rise of e-commerce platforms like Shopee, Lazada, and TikTok intensifies this rivalry by allowing consumers to compare brands side-by-side during frequent promotional events (PCMI, 2024). Consequently, the overall rivalry among competitors is classified as *High*.

B. Current Product/Brand Situation

Brief History of the Brand

The American fashion brand Mossimo was founded by Mossimo Giannulli in the year 1986 in Newport Beach, California. He initially borrowed \$100,000 from his father and produced three-paneled, neon-colored beach volleyball shorts and t-shirts with an emblazoned signature on each garment, selling his creations to local surf shop owners from his garage. Mossimo was

successful from the start, with sales amounting to over \$1 million by the end of the year. By 1991, Mossimo expanded beyond beachwear, and began producing a wide variety of casual sportswear products including sweatshirts and sweaters. The year 1993 saw the company selling over \$20 million worth of products and opening its first retail outlet in Costa Mesa. Sales soared to nearly \$110 million by 1995, and the company had over 30 stores. Women's clothing production was also started, and men's tailored suits were being made simultaneously. To pump up their rapid expansion financially and to increase their distribution channels, Mossimo took the public route in 1996 through an initial public offering (IPO) (FundingUniverse, n.d.; Mossimo Authentic, n.d.).

When Mossimo attempted to enter the high-end fashion market, they experienced financial difficulties, and the stock price plummeted. As a result, Giannulli had to alter his strategy and entered into a massive licensing agreement with Target in 2000, whereby Mossimo became an exclusive, multi-product line in a number of Target's outlets. This partnership did not only open up a vast new customer base, but it also characterized the brand as an affordable and family-friendly clothing alternative distributed widely across the US (FundingUniverse, n.d.). Iconix Brand Group acquired Mossimo in 2006. While Mossimo was eventually phased out of Target stores in 2017, the brand still continues to trade its products through international licenses, as in the Philippines, where the brand is presently managed by Promark Industries, Inc (Babcock, 2015; Mossimo PH, n.d.).

From a street and sport-focused apparel label, they have expanded to a more diverse mid-range American lifestyle brand that specializes in clothing that caters to the youth, including apparel, accessories, and undergarments. It has expanded globally through international licenses in the US, Australia, South America, Mexico, Japan, the Philippines and more recently, Thailand (DKSH, 2022; Iconix, 2025).

The brand's main activities include developing a casual lifestyle aesthetic with the goal of incorporating comfort, versatility, and style. Operational activities include utilizing omnichannel merchandising, long-term and short-term multimedia campaigns, and penetrating the market with digital advertisements to ensure brand awareness, interest, and profitability.

Mossimo values community building through many collaborations, partnerships, and sponsorships by means of hosting offline events, activations, and public relations events. The brand is upholding a strategy that centers on making sure they achieve market penetration and growing of sales volume globally.

Definition of the Market or Market Segment Targeted (Primary and Secondary)

Primary Target Market

Primary Target Market Profile Analysis		
Category	Segmentation	Description
Demographics	<i>Gender</i>	Male and Female
	<i>Age</i>	Young adults, generally in their late teens to early 30s (Generation Z).
	<i>Socioeconomic Class</i>	Middle and upper-middle income brackets.
	<i>Occupation</i>	Students and young professionals.
Psychographics	<i>Interest</i>	Fashion, social media trends, and value.
	<i>Lifestyle</i>	Casual and social.
	<i>Personality</i>	Value-conscious, trendy, and practical.
Behavioral	<i>Purchasing habits</i>	Highly responsive to promotions like frequent sales and discounts.
	<i>Shopping Preference</i>	Uses both online (e-commerce website) and offline (physical stores) channels.
	<i>Benefits Sought</i>	Good value for money, trendy designs, and comfortable, stylish apparel.
	<i>Usage Rate</i>	Frequent shoppers who update their wardrobes regularly to keep up with trends.
Geographic	<i>Location</i>	Densely populated urban and suburban areas throughout the Philippines.
	<i>Coverage</i>	Nationwide network of physical stores, particularly in major shopping malls in cities like Metro Manila and Cebu.

	Online Reach	Nationwide delivery service through the e-commerce platform, reaching provincial areas as well.
--	---------------------	---

Table #2. Primary Target Market Profile Analysis

Mossimo was originally known for its niche streetwear offerings. However, due to the changing landscape of consumer preferences and fashion trends, the brand has now transitioned into offering casual wear that aligns with the dominant fashion trend today. Its primary target market consists of male and female consumers, usually belonging to Generation Z, who are in their late teens to early thirties. This segment is characterized by middle to upper-middle income brackets, consisting of students and young professionals that live in the highly urbanized and suburban cities across the Philippines.

Many of these consumers are technologically savvy and trend-oriented, often updating their closets with the latest looks. They care about style, but they also want clothing that's practical and comfortable for everyday use. Since they lead casual and socially active lives, they prefer pieces that can easily transition from formal to informal settings. Mossimo offers clothes that can be worn to class or the office, then out with friends later that evening. While they generally have disposable income, they are still value-conscious, which is why they remain highly responsive to sales and discounts. Because they're omnichannel shoppers, Mossimo caters to their needs through a strong presence in shopping malls within densely populated areas, along with e-commerce platforms. The brand also offers nationwide delivery, which improves accessibility and allows the brand to reach consumers in provincial locations, helping broaden its market reach.

Secondary Target Market

Mossimo's secondary target market is made up of the parents or parental figures of their primary target consumers. Typically, these are individuals aged 35 to 65 who have children belonging to Generation Z. The secondary target consumer must also belong to either middle to upper middle income brackets, as they are expected to be benefactors of the primary audience. As the brand operates nationwide, they may come from anywhere in the Philippines. It is necessary that the secondary audience practices buying clothing for their children, often knowing

what style their kids would prefer or having a good eye for pieces that would suit them. Ideally, these parents or parental figures would have also owned Mossimo products to ensure their familiarity with the brand.

Market Positioning vs. Product Positioning ***Market Positioning***

Mossimo PH positions itself as a mid-range clothing brand that highlights a combination of styles such as surf, urban, sport and street fashion. The brand refresh steers the designs into that which is more flexible, casual, and applicable to different lifestyles, whether as students or professionals. Its target primarily consists of older teens to young working professionals, from ages 18-34 years old. Offering a wide range of products, from shirts, jackets, jeans, and skirts, Mossimo has further diversified its product range to include perfume, bags, and hats or caps.

With the brand refresh that began with the launch of the ‘New Days’ campaign, the brand is guided by the tagline “Mossimo for everyone, everywhere.” This tagline highlights the brands desire to be the go-to brand for clothes and other accessories for young consumers looking to express themselves through street style or even more elevated looks.

Product Positioning

Staying true to the brand’s essence, Mossimo PH has positioned its products strategically by identifying itself as a mid-range lifestyle apparel brand for the style-conscious consumer segment. This pertains to consumers who seek authenticity, versatility, and quality in their everyday clothing, and recognize the value of upgrading their styles. The brand is driven by the integration of fast fashion, where it benefits from its authentic California roots Mossimo now focuses on a modern lifestyle, offering versatile comfort that allows its clothing lines to cater to various occasions. Although the brand is on par with its competitors in offering a wide range of products, keeping up with trend cycles, and having an excellent distribution network, the major source of Mossimo's differentiation is its commitment to unmatched contemporary styling, authenticity, and quality. This promise not only helps the brand go up the ladder of customer value but also positions it strongly on the perceptual map, where a mid-range price index and a

very high score of authentic brand equity are combined, thus fortifying its differentiated value proposition for the selective young Filipino consumer.

Past Marketing Strategies vis-a-vis Objectives and Goals

Past Marketing Strategies vis-a-vis Objectives and Goals

1. Mossimo x Daniel Padilla

Launch Date: 2022; Summer 2023; Holiday 2023

Type: Out-of-home Advertising, Events Marketing, Social Media Marketing Campaign

Objective: To renew local interest in Mossimo

In 2022, Mossimo launched a campaign with Daniel Padilla, the brand's first local endorser. The initial launch of Mossimo x Daniel Padilla was launched in October 2022 with the theme "Happy Vibes", reintroducing the Filipino-favorite brand to a new generation. The campaign was executed through billboard installations, events and guestings with Daniel Padilla, and multiple press releases.

Maintaining connection with the local audience, the brand carries over the collaboration to summer 2023 with the "Sexy Vibe" campaign, a collection full of fresh summer designs. The collection consisted of relaxed but stylish pieces, perfect for the summer, featuring a variety of denim and graphic tees. The collaboration with Daniel Padilla was capped off with the 2023 Holiday "Gekko Collection", a Japanese Streetwear-inspired collection.

Prior to the launch of the Gekko Collection, Mossimo's Tiktok Account reached an average of 7,000 viewers and had 200 engaged audiences. After the launch, the Tiktok account had reached over 4,000,000 viewers, with more than 90,000 audience engagements, an increase of 591.82% on viewership and 439.76% in audience engagement.

As for Mossimo's Facebook accounts, the Gekko Campaign provided a 41% increase in Facebook reach and an 8% increase in new

	page likes. The brand's Instagram account on the other hand saw a 71% increase in reach and 251.1% increase in new followers. Overall, the campaign was executed both through traditional advertising and social media advertising, exhibiting a significant growth in engagement on social channels.
2. 2024 Women's Month Special - <i>"Mossimo for Everyone, Mossimo for Every Woman."</i>	
 	Launch Date: March 2024 Type: Social Media Marketing Campaign Objective: To celebrate women's month and to deliver the message that Mossimo is for every woman Featuring Jai Asuncion, Baninay Bautista, Lenie Aycardo, and Jean Bonilla, the Mossimo Women's Month Special was launched in March of 2024 through social media platforms Instagram, Facebook, and Tiktok. The campaign highlighted the resilience and strength of four female content creators, all with different niches and how they shaped their different industries through their work. The launch video of the campaign featured HERstory, a storytelling of the different perspectives of the four women involved in the campaign. Together with the campaign, the brand also released a collection dedicated to the women's line, including a variation of women's clothing. The collection ranged from soft and graceful looks to fierce and powerful pieces.
3. Mossimo Bikini Summit	
	Launch Date: 2002; 2003; 2004; 2005; 2006; 2007; 2009; 2011; 2017 Type: Bikini Pageant Event Objective: To increase brand visibility, highlight underwear and swimwear lines, and to produce brand ambassadors. First launched in the year 2002, the Mossimo Bikini Summit was staged in Boracay island and became a well-known event, particularly

	in the modeling scene. Typically held during the summer season, majority of the Bikini Summits were held in beach resorts, with the exception of the 2009 event that was relocated to the SM North Edsa Skydome due to inclement weather. The 2011 Mossimo Bikini Summit was a combined event with the Mr. and Mrs. EcoTourism Philippines Pageant, promoting awareness, appreciation, and highlighting the country's eco-tourism. The event was a casting call open to all aspiring models with Filipino ancestry that needed to go through application and screening processes to be confirmed as a contestant in the summit. Titleholders of the event received cash prizes and sponsorships from different brands. Some notable winners include Gerard Acao, AJ Dee, and Jordan Herrera. Aside from showcasing model talents, the event also highlighted the collaborations between Mossimo and Filipino designers such as Albert Andrada, Cary Santiago, and Junjun Ablaza.
--	--

Table #3. Past Marketing Strategies vis-a-vis Objectives and Goals

Current Marketing Mix **Product**

Mossimo provides consumers with a vast selection of clothing and apparel. Inspired by California Streetwear, the brand designs products, sources materials, manufactures goods, conducts quality control and distributes their pieces to the Philippine market through Promark Industries Inc. (PII). Shirts and denim jeans are Mossimo's top-performing products, standing at the forefront of their distribution channels. These usually include basic t-shirts with the Mossimo logo or Mossimo-specific artwork offered in men's, women's, and unisex designs. Although Mossimo also sells clothing for children, it distributes kids wear under "Mossimo Kids," which caters to children below the age of 12 and is considered to be a separate brand still handled by PII. Mossimo follows a seasonal release schedule in the following order: Summer, Fall, and Holiday. The Summer collection usually begins in March and ends in June; Fall follows after and ends in October; and the Holiday season runs from November to February. The entire collection is usually released in batches to ensure that each product has sufficient time to be highlighted during its run.

Other notable items that Mossimo has sold in the past include swimwear, eyewear, and socks. However, Promark Industries Inc. has yet to release new designs for these products, which temporarily marks them as discontinued. They have, however, ventured out to other miscellaneous items such as bags, hats, slippers, fragrances, luggage, tumblers, and handheld fans. These items are usually saleable, but are also placed as promotional items from time to time.

In accordance with their desire to target a younger demographic, Mossimo's product offerings have expanded to include different silhouettes that appeal to Generation Z. The latest inclusion being their fashion line, which encompasses pieces that offer more structure knit and woven tops, polo shirts, collared shirts, button-downs, jackets, dresses, pants, and shorts. It follows the same segmentation as their basic products, having options for men and women alike. Occasionally, Mossimo will also partner up with other brands to release merchandise, such as their collaboration with Netflix's One Piece live action series and Squid Game series. Depending on the collaboration agreement, Mossimo may release non-clothing items like luggage for the partnership as well, as seen in their collaboration with Coca Cola. Overall, the brand offers multiple retail products that reflect the subtle changes in culture.

Pricing

Mossimo's pricing is set at a mid-range level, balancing quality with affordability, making the brand accessible and within the reach of its primary target market, Generation Z.

The brand employs multiple pricing strategies to cater to the diverse preferences and behaviors of its target market. One significant approach they use, evident in their e-commerce platforms, is psychological pricing. This strategy focuses on how the prices of products are displayed to make them appear more appealing and affordable. These are mainly done through sale promotions, wherein the original price is struck through, showing a lower discounted price on the side, usually within a limited period of time. Additionally, their pre-holiday treat highlights "Under ₱380 / Under ₱580 / Under ₱780 / Under ₱990" categories. Even though these are genuine pricing reductions, the way they are presented can activate a psychological reaction, as consumers will feel that they saved money and should buy now before the prices go back up

again. This kind of strategy encourages impulse buying and increases the likelihood of purchasing, especially for price-sensitive buyers or those emotionally motivated by bargains.

Mossimo also uses competition-based pricing strategies simultaneously. This strategy means they align their price point with their competitors to make sure that their prices are not perceived as too expensive or too low-tier. If their prices are too expensive, consumers might shop with their competitors, avoiding their brand. If too low, consumers might perceive that their product is of lower quality than their competitors.' For example, Mossimo's basic tees, priced at ₱800 to ₱1,000 without a sales discount, align with their competitors' prices. By keeping the prices similar to those of their competitors within the same industry, Mossimo protects its image, stays relevant in the market, and avoids losing customers. This supports the brand positioning of Mossimo as an accessible lifestyle brand, not a luxury or low-cost brand.

Using multiple pricing strategies gives Mossimo flexibility in the fast-changing apparel industry. By combining psychological and competition-based pricing, Mossimo can keep up with the competition and sell more clothes while staying profitable, remaining appealing and attainable for its young, socially connected target customer base.

Place

Handled by Promark Industries Inc. (PII), the distribution strategy of Mossimo's products in the Philippines is centralized in quality control, marketing campaigns, and physical store concepts. Starting from four physical stores in 1998, Mossimo has widened its reach in the physical retail industry, growing into 92 stores nationwide. Their model and prime stores are strategically found in high-traffic major shopping centers like SM North Edsa, Ayala Malls in Metro Manila. There are also standalone stores around North Luzon, South Luzon, and some stores in Visayas and Mindanao. This guarantees the maximum visibility and accessibility to its target market. Making sure to reach all its target consumers, Mossimo also utilizes the omnichannel distribution model, which includes having its own official website and major third-party online marketplaces. Based on the Shopify platform, the brand showcases its latest and available products ready to order and ship. Their presence in official outlets on popular platforms like Lazada and Shopee, as well as ensuring reaching netizens in TikTok through TikTok Shop.

This strategy aims to ensure the brand's product line to be accessible everywhere and just at eye-level with their target market, the Generation Z, since this market is active and present in both retail stores, most especially, in digital stores.

Promotion

In an effort to remain relevant in a competitive industry that requires players to stay agile Mossimo employs promotional tactics that meet their customers where they are at, and adhere to their interests. Mossimo's promotional strategies primarily focus on the following: digital advertising, in-store promotions, brand partnerships and brand activation events.

To reach a target market that is tech-savvy and constantly online, Mossimo utilizes social media platforms such as Instagram, Facebook, and Tiktok to promote the brand and its products. At current, Mossimo Ph has about 44.1K followers on Instagram, 38K followers on Tiktok, and 283K followers on Facebook. On these social media pages, the brand usually utilizes lifestyle content that showcases how their products can fit into a consumers daily life; content that is unassuming and casual, yet highlights different clothing and fashion products. These contents are typically posted as short form videos or carousel photos. Furthermore, the brand heavily relies on User-Generated Content driven by influencer collaborations and partnerships that allow Mossimo to penetrate their target market through the posts of well-known influencers.

As for in-store promotions, the brand utilizes visual merchandising to highlight newly released clothing collections as well as digital billboards that are displayed at the store entrances. The digital displays usually serve as announcement boards for the different seasonal sales that Mossimo has such as end of season sale, payday sale, and free items for a minimum amount of purchases. In recent years, the brand has also participated in different brand partnerships and collaborations, resulting in limited edition clothing items. Some notable partnerships are that with the shows One Piece, Squid Games, as well as with the soda brands Fanta, Coca Cola, and Sprite.

Lastly, as a brand with a significant following from the older generations, the brand maintains its constant brand activation events that happen onsite in different store locations. Mossimo's brand activation events feature different attractors such as Mossimo Coffee Booth, Photobooth, prize machines, and occasionally, a live DJ.

Current Marketing Strategies

1. New Days

MAKE WAVES WITH US!
Hello, BEA CARLOS!
Join us for the Mossimo Summer Club Event
at Fatwave Surf Resort, La Union, on March 22, 2025!
A day of sun, surf, style, and great company awaits.
Let's make waves together!
See you there!
MOSSIMO PHILIPPINES © 2025

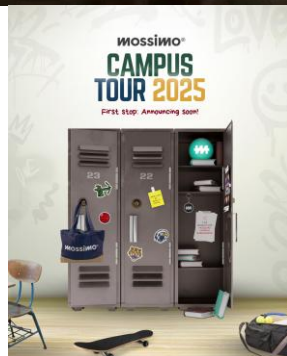

Launch Date: February 2025

Type: One-Year Marketing Campaign

Objective: To increase in-store foot traffic

The Mossimo New Days Campaign runs adjacent to the Mossimo brand refresh. It is the first official Marketing Campaign that utilizes everything new brought about by the refresher, hence the name “New Days.” This includes the use of the new logo as well as some of the store reopenings done by the company to garner attention from the market. The entire campaign is split according to Mossimo’s seasonal releases, namely: “New Days” for Summer; “New School” for Fall; and “New Nights” for Holiday. It is a hybrid campaign composed mostly of social media marketing and events marketing, bringing about new experiences for Mossimo such as brand trips, campus tours, and sale kick-offs. While New Days serves as the overarching big idea for New School and New Nights, it also serves as the Summer season’s main theme. To distinguish New Days as a seasonal campaign, Mossimo’s Summer Club was developed. The Summer Club event was a brand trip to La Union, involving multiple influencers who were tasked to provide coverage on the event to their followers.

2. New School

Launch Date: June 2025

Type: Digital and Experiential Marketing Campaign

Objective: To increase in-store foot traffic; To raise brand awareness in Generation Z

Following New Days is the New School line, which focused on college life and its intricacies. It opens with the Mossimo Campus Tour 2025, hosting a series of visits to the Philippines’ “Big 4” universities. The campaign’s main strengths lie in its utilization of activation booths and campus ambassador searches, allowing Mossimo to make use of student influencers and their reach. A collaboration with Filipino Actors Ashley Sarmiento and Marco Masa as Mossimo’s newest brand ambassadors was also developed to build up the brand’s digital presence. With the student lifestyle in mind, Mossimo developed a fashion line that was sure to fit the preferences of college learners, which was marketed with various giveaways and product displays within the campus booth activations.

3. New Nights

	Launch Date: November 2025 Type: Digital and Experiential Marketing Campaign Objective: To increase in-store foot traffic; To build up the Mossimo Creators Community Tying it all back to the essence of “new,” the last installation of the New Days campaign is New Nights. The campaign focuses on the bright future of Mossimo as “New Days” happen. It is centered on themes of thanksgiving, celebrations, and night life. Similar to other two installments, New Nights also features an event at the heart of the campaign. The Mossimo Thanksgiving Party is an exclusive, invite-only dinner featuring the community Mossimo has built around itself. It serves as a public relations event, showing appreciation to celebrities, influencers, and employees who have stood by the brand. On the other hand, it can also be viewed as a networking event, as new faces are invited to be a part of Mossimo’s inner circle. From the consumer perspective, campaign materials are to be released online, coupled with minor additions to visual merchandising displays loaded to emulate the holiday season in stores.
---	---

Table #4. Current Marketing Strategies of Mossimo

C. Competitive Situation of Direct Competitors

Given Mossimo's status in the Apparel industry, the researchers have identified Bench and Penshoppe as direct competitors. Although Mossimo does not want to be directly associated with these brands, it is evident that they share many similarities in various aspects such as product offerings, target market, and market presence.

	MOSSIMO®	BENCH/	PENSHOPPE
Presence of Physical Store	Has 92 stores nationwide.	Has over 600 stores nationwide.	Has over 500 stores nationwide.
Presence on E-commerce	Available on the official Mossimo website, Lazada, Shopee, Tiktok Shop.	Available on the official bench website, Lazada, Shopee, TikTok shop, and Zalora.	Available on the official Penshoppe website, Lazada, Shopee, and TikTok shop.
Presence of Website	Website Available: https://www.mossimo.ph/	Website Available: shop.bench.com.ph	Website Available: www.penshoppe.com
Price Point	₱790 - ₱2,990	₱299 - ₱2,099 (Base Price for T-Shirts to Jackets,	₱329 – ₱1,599

	(Base Price for T-Shirts to Jackets, without discount).	Without discount).	(Base Price for T-shirts to jackets, without discount).
--	---	--------------------	---

Table #5. Competitive Situation of Direct Competitors

Bench

The first identified direct competitor of the brand Mossimo is Bench. Founded by Ben Chan in 1987, the brand initially began selling men's shirts and jeans in a local department store (World Branding Awards, n.d.). However, by expanding their product lines and leveraging strong celebrity endorsement and aggressive marketing campaigns over the years, they evolved into the Philippines' largest homegrown Lifestyle and Fashion Apparel brand. Today, the brand operates over 600 retail stores nationwide and has expanded internationally in countries such as China, the United States, and the Middle East (Bench, n.d.). They also expanded their presence and availability through their official website and other e-commerce platforms such as Shopee, Lazada, TikTok Shop, and Zalora.

Bench's strong competitive presence arises from its overlapping target market with Mossimo Philippines. Both brands directly appeal to Gen Z and Millennials, who are heavily influenced by trends they see online. Both brands are positioned within the fast fashion industry, offering a similar range of products such as shirts, denim, jackets, and many more. This wide yet similar assortment of clothes allows both brands to meet the fashion needs of their overlapping target market. In terms of pricing, Mossimo's base prices range from ₱790 to ₱2,990, while bench ranges from ₱299 to ₱2,099 without discounts. Although Mossimo has a slightly higher price point than Bench, it remains comparable within the mid-range segment and remains accessible to young, budget-conscious consumers. Additionally, Mossimo frequently offers promotions and seasonal sales, during which its prices become closely aligned with Bench's pricing. This makes both brands interchangeable options for consumers to buy trendy and affordable clothes.

From a distribution point of view, both brands are strategically located in high-traffic and urban-based malls. This ensures that they are visible and accessible to their target consumers. However, Mossimo has a more limited retail footprint as it only has 92 stores nationwide compared to Bench, which has over 600 stores nationwide. This gives Bench an advantage, which

allows the brand to reach a broader geographic market. In terms of online presence, both brands have developed strong e-commerce operations, as they are available across multiple local online marketplaces. Lastly, in terms of promotional strategies, both brands utilize social media marketing, influencer collaborations, and visually appealing campaigns that resonate with young Filipino habits and lifestyle, which creates a strong brand relevance to their shared demographic. However, Bench is known for pioneering the use of top celebrity endorsers, partnering with well-known local celebrities and even international artists like Korean Celebrities. This helps Bench gain stronger brand image, which gives them an advantage in attracting a wider and more diverse audience than Mossimo.

Overall, the similarities seen and some overlap across the 4Ps of both brands' positions position Bench as a strong and direct competitor in the fast fashion landscape within the Philippine apparel industry.

Penshoppe

Following Bench, Penshoppe is considered the second direct competitor of Mossimo Philippines. Founded in Cebu in 1986 by Bernie Liu, it initially focused on selling graphic t-shirts for teens in Visayas and Mindanao. It expanded to Manila in 1991 and also grew into one of the leading brands in the local apparel industry through aggressive celebrity endorsement, franchising, and strong logistics. Today, the brand operates over 500 retail stores nationwide and has expanded internationally, including the UAE, Saudi Arabia, Indonesia, and Vietnam (Francorp Philippines, 2020). They also expanded their presence and availability through their official website and other e-commerce platforms like Shopee, Lazada, TikTok Shop, and Zalora.

Both Mossimo and Penshoppe carry clothing items that have a similar style, particularly one that embodies trendiness, street style, and casual wear. These brands both follow a fast-fashion business model that also targets teenagers and young adult consumers. While Mossimo's price points are generally higher than Penshoppe's prices, which range from ₱329 to ₱1,599, both brands are still within the mid-range segment and affordable, especially with Mossimo's frequent promotions that make their prices more comparable.

Penshoppe, however, has a greater advantage than Penshoppe in terms of its presence in physical stores in the country. Penshoppe dominates Mossimo in this aspect, given that Penshoppe has a total of over 500 stores spread across Luzon, Visayas, and Mindanao. Mossimo, on the other hand, has fewer stores, only having 92 stores nationwide. In terms of online presence, both brands have developed strong e-commerce operations, as they are available across multiple local online marketplaces, like Shopee, Lazada, and TikTok Shop, and their own website. In the aspect of promotions, both brands still utilize social media marketing, influencer collaborations, and visually appealing campaigns. However, the difference is that Penshoppe focuses heavily on high-profile international and local celebrity endorsements, making this an advantage.

That being said, this places Penshoppe as a fierce competitor to Mossimo in the apparel industry that is highly volatile to consumer trends and preferences.

D. Competitive Analysis of Indirect Competitors

With the Apparel and Footwear industry being so saturated, the following brands have been recognized as Mossimo's indirect competitors: Zara and Uniqlo. Although they have potential to be considered as direct competitors, there are specific factors that affect the decision to place them as indirect competitors. These factors are to be discussed in the individual analysis of each brand.

Table #6. Competitive Situation of Direct Competitors

Zara

Zara is a Spanish global fashion powerhouse under the Inditex Group, with over 2,200 stores worldwide. They provide trendy apparel along with their other product lines like Zara Home collection, perfumes, accessories, footwear, and their premium "Studio" and "Origins" lines for women, men, and children. It is known for its “fast-fashion” business model, supported by its vertically integrated supply chain, which can produce its own high-fashion runway trends into affordable retail pieces with speed and efficiency. This trend-driven approach is what sets Zara apart from the casual offerings of Mossimo, positioning itself as a provider of “accessible luxury.” They can be found in the upscale shopping malls here in the Philippines, such as Power Plant Mall and Glorietta, and have a localized website and app for online shopping. Regular product prices range from Php 995 to Php 7,990, however bi-annual clearance sales significantly reduce prices to as low as Php 595. Their distinctive branding strategy involves minimal reliance on traditional advertising, such as print or television, to reinforce their positioning. The brand invests in strategically located, meticulously designed storefronts that serve as an immersive brand touchpoint, as well as magazine-style digital content, collaborating with high-end photographers and models. Their marketing traction comes from social media exposure from

fashion haul videos and organic influencer content, instead of having direct advertising campaigns.

Uniqlo

Uniqlo is a Japanese clothing brand that operates over 1,000 stores internationally. Their products are mostly clothing, catering to the needs of men, women, children, and babies. The brand is most known for their “clothing technology” lines, like the Heat tech and AIRism pieces that sets them apart from their competitors. Their Japanese-inspired, minimalist theme is what makes them different from Mossimo, as well as their affordable price points during sale seasons. Their other prominent products include their innerwear, loungewear, maternity garments, UV protection line, and their multiple brand collaborations. Their collaborations have garnered many followers across different fanbases, with notable collections coming from KAWS and JW Anderson. Consumers may find Uniqlo in malls at their own stores or in central business districts that house the brand in their own buildings. For online options, Uniqlo has developed its own app and website for customers to enjoy hassle-free shopping. Price ranges for their products are from Php 590 to Php 2,490 when regularly priced, and may drop down to as low as Php 290 during sales. Uniqlo’s branding follows the style of its products, producing minimal and minimalist promotions. While they do have digital marketing strategies that utilize influencer partnerships, the company gains the most attention from announcing product discounts. Physical promotions are not used that much as well. If there are any, they typically come in the form of modern LED billboards rather than traditional vinyl ones.

E. Perceptual Mapping

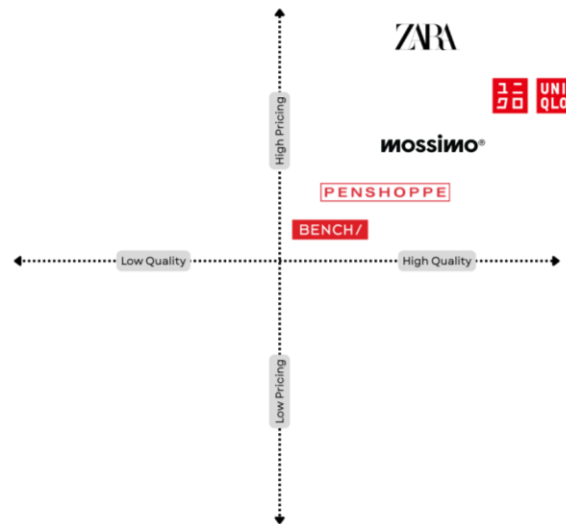

Figure #4: Perceptual Map of Mossimo and Competitors

Perceptual mapping allows for a quick local comparison of Mossimo against other fashion brands in terms of two major dimensions: *price and perceived quality*. Mossimo stands between local brands Bench and Penshoppe and global brands Uniqlo and Zara which demonstrates its function as a connection between budget-friendly local fashion and premium international fashion brands.

IV. Research Support

The researchers will collect primary data as a supplement to the secondary data presented in order to identify and validate the consumers perspective, behaviour, and perceptions towards the brand Mossimo and the efficacy of its marketing strategies. A Usage, Attitude, and Image (UAI) Survey will be utilized to gather information as regards to the target market's spending habits, perceived brand visibility, and visual merchandising effectiveness of Mossimo. The information gathered from the initial survey will be further elaborated upon and supported by a Focus Group Discussion (FGD) that will be conducted with the participation of a select number of respondents of the UAI survey.

A. Research Objectives

This study aims to achieve the following objectives:

1. To define Mossimo's target consumers' profiles through demographics, psychographics, media habits and contemporary lifestyles.
2. To understand the key drivers of purchase behavior, motivations, needs and decision-making that influence Mossimo's consumers

3. To evaluate brand performance, brand awareness, brand image and perceived values across traditional, digital, and experiential touchpoints compared to key competitors.
4. To assess consumer perception of Mossimo's value proposition, particularly in terms of price, quality, and style.

To generate actionable consumer insights to improve marketing effectiveness, omnichannel experience, and overall brand strategy.

B. Research Methodology

This study employs a mixed-method approach to gather thorough insights into consumer behavior, including usage patterns, attitudes, purchase intentions, brand perception, and preferences. To achieve the research objectives, this study will utilize the following methodologies:

1. Usage, Attitude, and Image (UAI) Survey

This tool is a comprehensive survey on the preferences and habits of Mossimo's target audience. It also tackles brand awareness, campaign reach and effectiveness, and brand cohesiveness. The survey was collected through Google Form submissions and was distributed through social media channels and in-store promotional material.

2. Focus Group Discussion (FDG)

A small group of participants, around 8 people, will be gathered and interviewed to further understand their perceptions, motivations, attitudes, and experiences toward Mossimo. The participants are a mix of first-time buyers, frequent buyers, and potential purchasers of the brand. This will capture a deeper understanding of consumer behavior that the survey cannot obtain and will serve as a helpful tool in interpreting the survey results.

C. UAI Survey and Interview Research Findings

UAI Survey Findings

The UAI survey garnered 286 responses from both the primary and secondary target consumers of Mossimo. More than half of the respondents met the criteria for the primary target market, with 45.8% of them being 18 to 24 years old and 27.3% being 25 to 34 years old. The majority of respondents were females (61.2%) and residents of NCR (58.4%). Considering the targeted age range of Mossimo, most respondents were either full-time employees (42%) or students (37.8%). However, only 27.6% of the respondents reached the ideal monthly income

range of Mossimo's target market. This could prove to be an issue overall as 39.2% of student respondents earn below the ideal range (less than Php 10,000) but are still prioritized as Mossimo's ideal consumers.

With the survey being distributed through official Mossimo outlets and social media, brand awareness amounted to 95.1% for all participants. The brand was mainly identified through their physical presence in shopping malls (51%), department stores (18.5%), and recommendations from friends or family (8.4%). Mossimo's visibility was much lower through their social media channels (8.7%) and e-commerce platforms (2.4%). Considering how Mossimo has been exerting resources on social media advertising, the brand may need to rethink its online marketing strategies. This is highlighted by the responses on campaign effectiveness since the recent brand refresh has gone mostly unnoticed, with 58% of respondents being unaware of the brand's new logo. Mossimo's latest campaign entitled "New Days" received the same responses, with only 36% of respondents noticing it. Despite respondents having generally positive reactions to the campaign materials provided in the survey, with most of them calling it "Fresh and Inspiring" (65.7%), respondents also believed that the marketing campaign was quite generic.

On the other hand, Mossimo shows great potential in acquiring bigger shares of the apparel and footwear market. Respondents who have recently purchased from Mossimo totaled to 59.8%, leaving 40.2% of respondents as possible future consumers. Additionally, respondents who recently purchased were generally satisfied with Mossimo products, with 62.3% of them ranking their satisfaction with a 5. A large number of respondents also answered that they would very likely be purchasing from Mossimo again (46.9%), indicating loyalty to the brand. With the majority of respondents answering that they are open to trying new styles (42.7%) or clothing stores (95.8%), Mossimo may convert them to become loyal customers by tackling their sensitivity to price (71.7%) and wearability (71.3%).

To gauge ideal media touchpoints, the survey asked respondents about their habits during leisure time. The responses were evenly divided between digital-related activities such as scrolling through social media (80.8%) or consuming visual media (65.7%) and physical activities like cafe hopping (54.5%) or hanging out with friends and family (64.7%). Shopping

both online and offline (47.6%) also proved to be an activity that participants enjoyed, which signals potential for Mossimo to garner their attention. These results also align well with the respondents' recommendations for better campaign visibility including paid online advertising (71%), information on sales and promotions (51.7%), using influencer endorsements (40.9%), having more physical events and activities (39.5%), and utilizing OOH advertisements (24.5%). By changing their strategies to balance out physical and digital marketing efforts, Mossimo can strengthen their presence within the local apparel and footwear industry.

Focus Group Discussion Findings

A total of two focus group discussions (FGD) were held, each having five participants that were students, fresh graduates, or young professionals. Participants were chosen from Mossimo consumers, even including some of their partner influencers. The participants generally agreed that their personal fashion sense stemmed from their desire for comfort or self-expression. Their responses for purchasing frequency alternated between smaller-quantity weekly shopping trips and larger-quantity monthly shopping trips. Other purchasing influencers included needing an outfit for certain occasions or finding pieces of particularly interesting clothing.

When asked about brand identity, respondents answered that the brand was versatile, bold, but also quite basic. Mossimo was repeatedly described to be playful, especially considering the brand's old marketing. However, negative comments were also made regarding the disparity between Mossimo's actual products and its branding. One of the respondents commented, "A lot of their clothing tries to go with the trend, but does not stick to the trend." Another mentioned, "There are some 'off' pieces that are neither modern nor trendy." This suggests that consumers have a good idea of Mossimo's brand identity, but are confused when presented with the physical evidence of the brand.

All of the respondents showed high satisfaction with Mossimo's product quality. There were mixed opinions regarding affordability, depending on whether the participants compared the brand to high-end or low-end competitors. For example, one respondent noted that "Let's say Zara. It's so expensive! But if I compare that with Mossimo, it's 10 times cheaper, and the quality is remarkable." Alternatively, a different respondent said, "There are some pieces na wala sa puso

kong bilhin, kasi namamahalan ako.” Plus-sized respondents also praised the men’s section for having garments that would fit larger frames. However, the respondents also voiced out that Mossimo’s current size range felt limiting. One participant shared, “If ever na meron pang mas malaking size, I would have bought that one instead.” Based on the respondents’ insights, there is a potential for Mossimo to venture into the plus-size market or to utilize cheaper price points in garnering sales.

Mossimo’s current marketing is viewed by the respondents to be aesthetically pleasing, but lacking a connection with its audience. Some participants observed that the current marketing makes the brand look less approachable, thus alienating Mossimo’s loyal consumers who do not belong to the primary target market. One participant urged, “Be more connected to more of the consumers of Mossimo who really buy the brand.” Another suggested to “adjust their positioning more to cater to their old target market but evolving to cater to what’s current.” These insights add to the problem of how consumers view the brand, seeing it as having no direction or vision. The brand’s identity crisis is further highlighted in the segment where participants were asked to associate competitors to Mossimo. Answers varied between brands like Penshoppe and Bench to H&M and Zara, with most respondents placing Mossimo somewhere in between the different categories of competitors. Participants commented they would prefer to shop from the brands they associated with Mossimo for diverse reasons. One participant said, “I’d choose Uniqlo because [they have] more styles and offerings compared to Mossimo.”

Overall, participants suggested that they would like to see more efforts from Mossimo in creating a niche that fits the brand. One stated “Actually they started it na with Schnozy, if they go with that direction...I want them to explore in a direction na mas makulay and bright yung mga items na binebenta.” As for product development, another contributed that “I wish that Mossimo had more signature pieces.” Other improvements include cohesiveness of the brand, its goals, and its marketing. One participant highlighted that “[The] store design needs to change, it doesn’t match what they’re trying to sell.” While Mossimo’s brand refresh has already gone underway, it needs to be strengthened to ensure that consumers have a clear idea of what they are purchasing.

V. SWOT/TOWS Analysis

A. SWOT Analysis

Strengths	Weaknesses
S1: Strong Brand Heritage S2: Wide Store Network S3: Brand Collaboration Acquirement S4: Access to Entertainment Industry S5: Established Digital Presence and Online Community S6: International Renown S7: Options for Manufacturing	W1: Lack of Traditional Marketing Strategies W2: Incremental Distribution of Marketing Materials W3: Limited Size Range of Products W4: Disconnected Visual Merchandising and Online Marketing Message W5: Limited Marketing Budget W6: Human Resource Limitations W7: Needs Structured Planning Strategy
Opportunities	Threats
O1. Sustainable Fashion Development O2. Growing Consumer Demand for Modern and Experiential Retail Environments O3. Expansion in High-Traffic Malls O4. Expanding Market for Athleisure and Bodywear O5. Emerging Consumer Preference for Inclusive and Gender-Neutral Fashion O6. Rising Popularity of Café and Coffee Culture as a Lifestyle and Social Hub O7. Popularity of Local Artist and Designer Collaborations	T1: Intense Market Competition T2: Rapid Trend Acceleration T3: Increased Focus on Sustainability and Ethical Concerns T4: Reputational Damage via Licensing T5: Economic Instability and Reduced Consumer Spending T6: Supply Chain Disruption T7: Counterfeit and Imitation Products

Table #7. SWOT Analysis

Strengths

S1: Strong Brand Heritage

Mossimo has been available in the Philippines for quite some time compared to their other competitors. At the peak of their success, they were well-loved and well-known by their previous target market, Generation X. Despite the market aging, loyal customers from Generation X continue to support Mossimo and its products. Repeat-buyers often shop for Mossimo's t-shirts and denim options, as these are what the brand was known for in the past. The older generations continue to view Mossimo as a brand that produces quality clothing that is great for everyday wear. This form of brand loyalty allows Mossimo to maintain its name and position in the industry, perceived in a positive light albeit being viewed as outdated. It also introduces the younger generation to Mossimo, as their Generation X parents may introduce them to the brand by word of mouth or by offering them their old Mossimo items.

S2: Wide Store Network

In terms of availability, Mossimo provides their customers with various options to purchase through their physical stores across the country. They are available in Luzon, Visayas, and Mindanao, with most of their locations being in Luzon. Mossimo operates its own retail shops while also being available in mall department stores. Aside from physical retailing, they also offer online distribution channels. Mossimo is available on digital shopping platforms like Shopee, Lazada, and TikTok Shop that makes purchasing more accessible and convenient for consumers. The brand has its own website that handles order placements and shipments as well. Consumers can find limited-edition or exclusive offers on the Mossimo website that are not available in stores. With Mossimo's many options for purchasing, consumers can find what they need with ease and are more likely to push through with their transactions compared to finding alternatives that cause them unnecessary stress.

S3: Brand Collaboration Acquirement

As previously mentioned, Mossimo has a wide array of brand collaborations. This ties into their brand identity of being youth-centric and up-to-date with trends, with Mossimo usually partnering with franchises that have rising popularity. Brand collaborations often have their own campaigns, which gives Mossimo more material for marketing. Using collaborations can widen audience reach to specific fanbases that might not have considered purchasing from the brand before. According to a study on fan-themed apparel conducted by Smith-Glaviana and Lee (2022), purchase intentions increase through social connection observed in collaboration designs. The study also suggested that more collaborations should explore subtle signaling through graphics, co-creation with fans, and inclusive merchandising practices for the female audience (Smith-Glaviana & Lee, 2022). As Mossimo already has experience with international franchises, it can utilize past and future collaborations in becoming a brand preferred by the youth.

S4: Access to Entertainment Industry

Brand endorsements, especially from celebrities, can help boost a company's presence within the Filipino market. In particular, celebrities with a parasocial relationship with fans and brand congruence give rise to impulse buying behaviors (Ong et al., 2024). Mossimo is no

stranger to using celebrities in advertising their products. They have previously done so in campaigns with Daniel Padilla and AshCo, better known individually as Ashley Sarmiento and Marco Masa. These campaigns have given Mossimo better online engagement, receiving social media interactions from the fanbases of the aforementioned celebrities. Mossimo's access to the entertainment industry can put them ahead of other brands, allowing them to secure contracts with rising stars faster or acquire big names within the industry. As such, they may also secure bigger fanbases that follow said celebrities.

S5: Established Digital Presence and Online Community

With its focus on digital marketing, Mossimo has built up its online presence to be of significant value to its community. Unlike most international brands with Philippine branches, Mossimo has its own dedicated social media accounts for the Filipino consumer base. Other companies tend to centralize their social media channels by having one account open to serve international customers. By having a separate account specifically for the Philippines, Mossimo can strengthen their relationship with consumers and online followers, ensuring that there is more to the brand than just making sales. It also allows the company to keep a keen eye on consumer preferences in regard to their content, adjusting their strategies based on social media insights and analytics.

S6: International Renown

Mossimo's status as an international company brings them a level higher over local brands. Consumers across the globe view them to have their own distinct style for streetwear and swimwear. This, paired with the Filipino people's affinity towards international companies, allows consumers to perceive them as a globally renowned brand. Being a global company often sets expectations of heightened product quality, which pushes consumers to purchase from them rather than a local startup. Due to the perception of being an internationally recognized brand, prices are also generally more acceptable as products are viewed to be of higher material value (Santos & Santiago, 2018).

S7: Options for Manufacturing

Mossimo does not limit itself to producing its own goods. Instead, it makes use of the global value chain and subcontractors in developing new collections. Manufacturing their own goods allows prioritization for Mossimo's products. It also ensures that quality is kept up to standard, minimizing lead times for operations should things go wrong. However, in the event that certain pieces require higher levels of technology and machinery, Mossimo also has the option to utilize manufacturers from China. Making use of outside suppliers can help fill gaps in quality that would otherwise be left present if local manufacturers were to be pursued. Should there be any supply chain issues that are limited to the Philippines, having international providers also helps avoid any potential delays. Any big collections that would be cumbersome on the company's factories can also be directed to subcontractors for smoother and faster processing.

Weaknesses

W1: Lack of Traditional Marketing Strategies

In an effort to reach the target market of young adults and teens that are avid users of online platforms, Mossimo focuses its marketing efforts on social media campaigns that are only found online, rarely employing offline methods. Previously, the brand made use of billboard advertisement for the Daniel Padilla endorsement, and had utilized broadcast advertising through an in-house radio channel, previously aired as Mossimo Radio. Since then, the brand has focused its efforts on online advertising, making it difficult to reach younger audiences that are unfamiliar with Mossimo and do not see this brand in their algorithm, nor know that it exists enough to search it. While digital advertising efforts are beneficial for customer interaction and is more cost-efficient, a combination of both traditional and digital marketing would provide a more targeted and measurable approach, eliminating the risk of neglecting a portion of the target audience (Viray, 2022).

W2: Incremental Distribution of Marketing Materials

Marketing materials that are used for visual merchandising in stores are usually distributed in a staggered manner. This means that it is first released in the main store location that is most updated while other branches lag behind on new brand posters and store-front displays. This delay weakens the brand's image and makes it difficult to compete with more agile

competitors. Fragmented systems due to multiple store locations make it difficult to deliver campaigns consistently across different branches, making promotions delayed which can eventually lead to customer frustration (Last Yard, 2025). This staggered approach also leads to failure in capitalizing on trends or promotional opportunities when store locations are not able to have a high impact on consumers that pass by.

W3: Limited Size Range of Products

At present, Mossimo carries the sizes small, medium, large and extra-large in women's tops and men's tops, size 25 to 32 for women's bottoms, and size 29 to 36 for men's bottoms. Relative to other fast fashion and apparel brands, Mossimo carries a limited range of sizes across all their products, making them unable to cater to consumers that are more petite or curvy. Size exclusivity leads to the alienation of target customers that do not fall within the standard sizing range, eventually leading to the loss of sales due to limited brand appeal to customers. Thus, a broader size range that is more inclusive can lead to improved customer satisfaction, customer loyalty, and repeat buyers given the diverse range of body types among the variety of customers (*The Role of Size Inclusivity in the Women's Clothing Industry*, 2024).

W4: Disconnect between Visual Merchandising and Marketing Message Online

Mossimo's brand re-launch ushered in a different era with a new logo that captured younger audiences. Although, the re-launch has not been able to fully reach its desired audience with only a handful of stores showcasing the new logo and many still bearing the brand's old logo. This causes a disconnect between in-store visuals and online marketing because of the inconsistent use of the brand's logo. As mentioned previously, promotional strategies are concentrated to online platforms and are rarely translated to in-store promotional materials, creating inconsistent messaging between physical stores and social media platforms. Because of this, inconsistent marketing communication leads to misaligned strategies that often result in under-performance of marketing campaigns (Valentine, 2017).

W5: Limited Marketing Budget

Mossimo's marketing budget is significantly smaller than that of competitor brands that fall under the same industry. Due to a limited marketing budget, Mossimo's marketing is limited

to strategies that are more cost-effective, therefore having a smaller audience reach in comparison to those brands with a bigger budget. It is natural for entities to minimize their marketing budget to cut on costs, however, it is a short term solution that may lead to long-term losses in leads and sales (*What Happens When You Cut Your Marketing & Advertising Budget?*, 2023). A limited marketing budget may lead to decreased brand awareness and recognition, requiring a brand to invest a larger amount to rebuild momentum and deliver high-performing ads. With Mossimo in particular, they are unable to invest in more costly marketing strategies such as billboards because of its high costs to install and maintain. However, the opportunity cost in not installing billboards would mean that Mossimo is not able to make themselves visible in prime, high-traffic locations that their target audience frequents.

W6: Human Resource Limitations

In a highly competitive retail environment, limitations with human resources available may be identified as a weakness, given that Mossimo is heavily dependent on its corporate talent to identify opportunities, plan strategies, and execute them well. At present, Mossimo's marketing and e-commerce department is relatively small, given the marketing strategies that the brand aspires to implement. With fewer people working in the department, team members typically would have to take on multiple roles in order to achieve the desired goal. Moreover, with a smaller team, members may easily get overwhelmed trying to accomplish multiple tasks at once, leading to them focusing primarily on short-term goals (*The Ultimate Guide to Marketing Challenges for Small Teams*, 2024). However, focusing only on short-term goals may lead to an undefined marketing strategy that is not consistent with long-term objectives. . Furthermore, a limited team means a limited number of specializations, which may lead to the brand missing out on expertise that can further help the brand flourish.

W7: Needs Structured Planning Strategy

With Mossimo being a brand that is driven by popular trends, it is difficult for the company to establish a structured strategy for their yearly marketing plans. Without an established annual marketing plan, the brand may experience inconsistent messaging throughout the different seasons when marketing messages lack cohesion and confuse audiences about the

brand (Allton, 2024). Additionally, the lack of strategic planning may also lead to missed growth opportunities that tend to be overlooked when insights and learnings are not utilized. In relation to human resource limitations, team members are placed in a position where they must be reactive marketers that respond to marketing opportunities in real time and need to act quickly in order to maintain momentum (Mika, 2024). Inherently, reactive marketing may lead to a brand staying at the top of people's minds, but it may be a problem when it is the default mode of marketing due to strategic confusion, a lack of measurable results, and inefficiency (*Chasing the Trend: Why Reactive Marketing Is a Mistake*, 2025).

Opportunities

01. Sustainable Fashion Development

Sustainable fashion development presents Mossimo Philippines with an excellent opportunity to tap into a growing values-oriented market, hence, mitigate brand risk. Evidence indicates the rise in demand from Filipino consumers, especially Gen Zs, wherein a huge preference is placed on sustainable brands (Biacora et al., 2023). Therefore, this is no fleeting trend. It is an rising advocacy for sustainability, in which we know that this narrative could negatively impact the purchase intention of buying fast fashion. Twenty-nine percent of Filipinos admit to binning clothes after one wear, contributing to an extensive pollution from the industry (Realino, 2025). Developing a narrative in the local context of Mossimo Philippines as a sustainable leader using practices such as recycled materials or fair labor from a fast fashion brand, will allow for personal market buy-in from the new Filipino generation (Biacora et al., 2023).

02. Growing Consumer Demand for Modern and Experiential Retail Environments

The growing consumer demand for modern, authentic experiential retail environments today is an opportunity to convert Mossimo Philippines' 92 physical stores. The latest PwC Global Consumer Insights Survey (2023), states that, although forty one percent (41%) of consumers prefer in-store shopping, consumers want to be technologically advanced. To drive foot traffic among shoppers, physical stores should prioritize in-store entertainment (34%), immersive digital experiences (30%), and personal shopping appointments (28%) (PwC, 2023).

The experiential improvements in-store will make a great tool for Mossimo to build loyalty directly with its customers. It is also said that knowledgeable and helpful sales associates are ranked as the primary factor (27%) that enhances the in-store experience, and that clearly overshadows the self-service kiosk (16%). People are generally more willing to interact with another person to purchase items. In investing in the staff and store atmosphere, Mossimo intends to create shareable community-focused moments that help transform its 92 stores from being points of sale to becoming destinations.

03. Expansion in High-Traffic Malls

Opening stores in high-traffic malls is essential because Filipino shoppers depend on physical stores for their shopping needs (Cruz, 2025). The prime locations in the market show signs of revival because SM Supermalls achieved their highest daily foot traffic record which reached 5.2 million visitors and this success created demand for space that resulted in only 11.4 percent of Metro Manila malls being vacant during Q3 2025. The company plans to expand its operations into markets which fast fashion companies dominate while establishing stores that work as centers for customers to pick up their online orders. Mossimo expands its market share through strategic spending in busy locations which increases its brand presence while the Philippine retail market is expected to grow at a 7.7 percent compound annual growth rate between 2025 and 2033 (IMARC Group, 2025b).

04. Expanding Market for Athleisure and Bodywear

Athleisure and comfortable apparel markets show rapid growth and presents excellent business possibilities for Mossimo Philippines. The local activewear market reached 1.86 billion dollars in 2024 because consumers changed their shopping habits and this market will double its size to 3.60 billion dollars by 2033 through growth at 6.81 percent yearly (IMARC Group, 2025a). Athleisure has emerged as a popular clothing choice among young urban dwellers because they want to wear comfortable post-pandemic outfits while staying fashionable (Tcholakova, 2025). Mossimo can establish new customer connections through targeted product expansion which introduces fresh shoppers to the brand while existing customers who need adaptable casual clothing will shop more frequently.

05. Emerging Consumer Preference for Inclusive and Gender-Neutral Fashion

Mossimo can design its market presence by establishing ties to the growing demand for inclusive gender-neutral fashion products. Fashion-inclined youth who make up most of the 8.1 billion Philippine clothing market drive this market transition, which shows that inclusive size options have become the main factor for growth in this space (IMARC Group, 2025a). The unisex category has received official recognition as a local end-user segment because 50% of Gen Z consumers make purchases that do not consider gender identity while 70% of worldwide consumers plan to buy gender-fluid fashion (Fleck, 2023). Mossimo can attract young Filipinos who embrace evolving genderless fashion because they will defy traditional gender identity boundaries through this current trend (Balaoro, 2023).

06. Rising Popularity of Café and Coffee Culture as a Lifestyle and The Third Place

Cafés have developed into coffee shops that serve as social hubs for people who want to connect with others in their community, which provides Mossimo with a chance to market its lifestyle offerings through vibrant space design. The Philippine coffee market is expanding because Gen Z and millennial consumers drive growth in the industry, which will see a market expansion worth 37.7 billion dollars by 2029 because these consumers now see environmental factors as more important than product prices (“Coffee Market Growth Analysis”, 2024; Fuentes, 2023). Mossimo can establish a community space which goes beyond basic customer interactions through partnerships with coffee chain businesses and social experiences at its flagship retail outlets. It can establish its position as a lifestyle brand through its retail spaces, which allow customers to experience their core daily activities that matter for Mossimo's target market (Alonzo et al., 2024).

07. Popularity of Local Artist and Designer Collaborations

Local artists and designers offer Mossimo essential collaboration opportunities, which help the brand establish credibility and cultural relevance among young shoppers. Gen Z, who represent around 38% of the population, value social responsibility and community, which causes the "support local" movement to focus more on artisanal production methods that involve direct,

manual work (PSA, 2025). Limited-edition collaborative collections allow Mossimo to enter the growing creative economy while meeting consumer demand for rare and distinctive items. Retail establishments transform their standard retail offerings into items that Filipinos highly value because Generation Z and Millennials value Filipino cultural pride.

Threats

T1: Intense Market Competition

The apparel and footwear industry is a highly competitive and saturated market. It is dominated by well-established players, from global fashion brands such as Uniqlo and H&M to local competitors such as Penshoppe and Bench. Homegrown brands and online niche brands/retailers on platforms such as Shopee, Lazada, and Tiktok also further escalate the competitive landscape. Moreover, the 9.2% annual projected growth of the industry increases the likelihood of new entrants according to Euromonitor (2024).

T2: Rapid Trend Acceleration

Trends have been evolving rapidly, and according to Dominus (2023), social media platforms like Instagram and Tiktok significantly contributed to it. This leads to people buying and disposing clothes frequently, increasing clothing waste, which is one of the major concerns associated with fast fashion nowadays. This is a serious threat to Mossimo as they need to respond quickly to what is relevant. If they fail to do so, consumers might switch to other brands.

T3: Increased Focus on Sustainability and Ethical Concerns

There is a rising interest in sustainable and ethically produced fashion among modern consumers, with 9 out of 10 Generation Z and Millennials willing to pay higher prices for brands that produce environmentally responsible clothes. This awareness is driven by the fact that fashion is linked to major environmental issues, producing four percent (4%) to ten percent (10%) of global greenhouse gas emissions annually, as well as labor concerns, and many consumers believe that companies have a responsibility to address them (Munoz Ron et al., 2021). If Mossimo fails to adapt and embrace these values, it may risk losing its relevance and market share as the brand may have negative brand perception and consumers may switch to competitors who focus on sustainability.

T4: Reputational Damage via Licensing

PROMARK INDUSTRIES INC. (PII) is the official licensee of Mossimo here in the Philippines that solely controls all domestic manufacturing, sourcing, and distribution (Mossimo PH, n.d.). This kind of licensing structure is also implemented in other countries where the Mossimo brand is sold. However, even with this kind of setup, Mossimo Philippines is still vulnerable to reputational risk caused by the actions or inaction of the licensor or other international licensees as the brand name is still global. Any negative news or controversies about Mossimo in other countries can affect the local consumer perception, given that information nowadays is easily disseminated online. This could be a threat to Mossimo Philippines, as consumers may associate the brand with the problems happening in the other countries, even if local operators are not involved. This can lead to weakened sales, loyalty, and trust in the brand.

T5: Economic Instability and Reduced Consumer Spending

Economic fluctuations and the high cost of living still vividly persist in the country. Even the lower headline inflation rate of 1.7% this year did not alleviate the burden for Filipinos, as many are still facing high prices for essentials, such as food and utilities (Maligro, 2025). Given the situation, Filipino shoppers prioritize buying the essentials over non-essential items, such as fashion goods, which significantly affects consumer purchasing power. This is a threat to Mossimo, as reduced non-essential purchases like clothes, which Mossimo sells, can decrease sales performance.

T6: Supply Chain Disruption

Mossimo Philippines sources a few of its clothing production from local suppliers and manufacturers, while still relying heavily on imports from China for certain garments and raw materials. This import dependency makes Mossimo vulnerable to supply chain disruptions, such as shipping delays, port congestion, geopolitical tensions, and many more. These kinds of challenges can hinder the brand from quickly responding to the rapid trend acceleration, affecting their sales performance and market competitiveness.

T7: Counterfeit and Imitation Products

Apparel has the largest share of counterfeiting complaints in the Philippines, with recent seizures worth ₱482 million (Intellectual Property Office of the Philippines, 2022; Sy, 2025). It circulates on both physical and online platforms, making it widely accessible to consumers. This poses a threat to Mossimo, as these imitations, with low price and quality, can attract price-sensitive consumers, which can undermine the brand's reputation and consumer trust despite the effort to maintain product authenticity.

B. TOWS Analysis

	Strengths	Weaknesses
	S1: Strong Brand Heritage S2: Wide Store Network S3: Brand Collaboration S4: Access to Entertainment Industry S5: Established Digital Presence and Online Community S6: International Renown S7: Options for Manufacturing	W1: Lack of Traditional Marketing Strategies W2: Incremental Distribution of Marketing Materials W3: Limited Size Range W4: Disconnect between Visual Merchandising and Marketing Message Online W5: Limited Marketing Budget W6: Human Resource Limitations W7: Needs Structured Planning Strategy
Opportunities	SO1: Business Hub Penetration (S1, S2, S5, S6, O2, O3, O6) To keep up with their desired brand image of being a premium clothing retailer, Mossimo should push for the opening of its retail stores in business hubs like BGC and Makati City. This also includes having stores in large malls like OneAyala or Uptown Mall. SO2: Nostalgia Marketing Campaign (S1, S4, S6, O2, O5) Utilizing its brand heritage, Mossimo should build both a campaign and a collection inspired by “vintage” Mossimo pieces. The campaign should feature Generation X consumers	WO1: Mossimo Murals and Interactive Art (W1, W5, W6, O2, O3, O7) Partner with local artists to craft Mossimo Murals that can be placed in high-foot traffic locations such as malls, parks, and in-store. Murals may also be interactive where passersby can also add to the art and take photos with the art. The mural should also include a call to action. WO2: Update Store Layouts in High Traffic Locations (W2, W4, W7, O2, O3) Store branches located in high traffic malls should be

	with their children, highlighting how Mossimo has evolved throughout changes in societal culture. The theme of the campaign should revolve around the timelessness of the brand. SO3: Swimwear Revival (S1, S2, S4, S5, S6, S7, O4, O5) Swimwear is a big part of Mossimo's brand identity. With beach culture slowly coming back in full force within the country, Mossimo ought to bring back their beachwear lines, innovating them to be size inclusive or gender inclusive to cater to several communities. SO4: Mossimo Cafe Workshops (S3, S4, S5, S7, O2, O6) During Campus Tour Activities, Mossimo has already opened its doors to opportunities related to the coffee and cafe industry. Mossimo can choose to partner up with a cafe and their choice of endorser to promote a series of Mossimo related activity workshops like shirt printing. Any event-specific material may be sourced by Mossimo as they have access to international manufacturers. SO5: Local artist collaborations (S3, S4, S7, O1, O5, O7) With the rise of the "shop local" mindset, Mossimo should try to collaborate with Filipino artists or singers in developing merchandise exclusively offered by Mossimo. It should reflect any of the artists' advocacies to add value to the collaboration, having a unique design developed by the collaborators.	given top priority in renovating the store layout to deliver the message and essence of Mossimo's new branding. The new logo should be utilized in all stores and visual merchandising should be aligned with campaigns across social media and traditional media. WO3: Release an Expanded Basics Collection (W3, O5) Highlight Mossimo's staple items and basics such as t-shirts and pants by releasing a basics collection that is available year-round and includes an expanded size range that includes petite and curvy sizes. WO4: Mossimo Coffee In-store (W1, W5, O2, O6) Establish Mossimo Coffee as a coffee shop that can be found in-store to attract coffee shop culture subscribers and provide a new value proposition. WO5: Mossimo Beach Summit (W1, O4) Revive and refine the Mossimo Bikini Summit to include a beach sports competition to relaunch the brand's swimwear and athletic line.

Threats		
T1: Intense Market Competition T2: Rapid Trend Acceleration T3: Increased Focus on Sustainability and Ethical Concerns T4: Reputational Damage via Licensing T5: Economic Instability and Reduced Consumer Spending T6: Supply Chain Disruption T7: Counterfeit and Imitation Products	ST1: Reestablish Strong and International Brand Awareness Countering Intense Market Competition (S1, S6, T1) Making use of Mossimo's well-defined brand identity and worldwide recognition as differentiation in an overcrowded marketplace, will place emphasis on credibility and timelessness. ST2: Responding to the Rapid Trend Acceleration by Maximizing the Wide Store Network and Digital Presence (S2, S5, T2) Mossimo's extensive physical and online presence can be leveraged for immediate drops of trend-responsive collections and ensure visibility at all stores and platforms without delay. ST3: Utilizing Brand Collaborations and Mossimo's Access to Entertainment Industry to Help Reduce the Impact of Sustainability and Ethical Pressure by Consumer Demand (S3, S4, T3) Collaborate with reputable artists, influencers, and entertainment figures advocating for ethical and sustainable fashion to market a brand Mossimo directly enhancing credibility and mainstream relevance ST4: Mitigating Supply Chain Disruptions by Having Different Manufacturing Options (S7, T6) The flexible manufacturing capabilities of Mossimo can help in producing a variety of products without too serious	WT01: Develop a Simple and cost-effective Marketing System (W1, W2, W4, W5, W7, T1, T2, T4, T5, T7) Mossimo should implement a low-cost, standardized marketing system such as ready-made templates, structured campaign calendars, and messaging about product authenticity on in-store and online visuals. This would maintain brand consistency, protect against competition, rapid trends, counterfeit products, and reputational risk. WT02: Build a Flexible Multi-Skilled Workforce (W2, W5, W6, W7, T1, T2, T5, T6) Mossimo should cross-train staff and simplify internal workflows to operate more efficiently and respond quickly to trend changes, supply chain disruptions, and economic challenges. WT03: Introduce Inclusive Basic Collections with Local Sourcing (W5, W7, T1, T2, T3, T5, T6) Mossimo should introduce basic clothing items that are locally sourced to ensure inclusivity, reduce reliance on the international supply chain, maintain availability of products despite rapid trend acceleration, and to also keep the prices accessible to cost-conscious consumers. WT04: Ensure Consistent Branding Across All Channels (W1, W3, W4, W5, T1, T3, T4, T7)

	delays in their distribution channels since they are not reliant on one single manufacturing source. ST5: Combatting Counterfeit and Imitation Products by Using the Digital Community and Brand Collaborations / Partnerships (S3, S5, T7) Enhance online visibility for Mossimo through exclusive collaborations and emphasize markers of authenticity to differentiate between the original product and the counterfeit. ST6: Mitigate the Offset Economic Instability Effects by Utilizing the Wide Store Network and Mossimo's Access to the Entertainment Industry (S2, S4, T5) Building in-store experiential activities, celebrity promotions, and time-limited offers can keep footfalls and maintain customer interest during times of reduced spending.	Mossimo should ensure consistent branding across stores, social media, and online platforms, which will strengthen brand credibility, reduce confusion about products and past issues connected to licensing and support ethical expectations.
--	---	---

Table #8. TOWS Analysis

VI. Goals and Objectives

A. Statement of the goals of the firm for the product/brand

People in the Philippines treasure their individual style and self-expression, particularly through fashion. As part of the urban lifestyle, young professionals and fashion-conscious consumers identify with this. Though global mass-market brands dominate the local environment, there is a market looking for more than only basic utility. Mossimo has to have an advantage in this highly competitive industry. Mossimo must develop into a brand that encapsulates a unique, relevant way of life rather than depending only on a traditional retail presence.

The UAI survey shows that Mossimo is well-known in the market but is not a first choice among the younger market. The public awareness gap between broad recognition and actual

purchase behavior presents a great opportunity for companies to convert their sporadic customers into loyal brand advocates. By means of extensive digital and traditional promotion across Metro Manila, the goal is to anchor a bold, authentic, and resilient brand identity for Mossimo Philippines. Through intentional repositioning, the study will differentiate Mossimo from the mass-market brands, creating a unique market space where our brand is a high-valued choice, easily identified and sought after by our local target consumers in the capital.

B. Short-term objectives (March 2027 to February 2028)

- **Sales:** To Increase Mossimo's net profit to Php 519,390,121.19, a 5% growth by 2028.
- **Digital Engagements:** To generate a 30% increase in engagement (likes, shares, comments) on Mossimo's social media platforms, reaching an average of 377,650 content interactions across all platforms.
- **In-store Traffic:** To boost the number of store visitors, generating at least 235 unique transactions per store every month.

C. Medium-term objectives (March 2028 to February 2030)

- **Sales:** To increase Mossimo's net sales by 8%, amounting to at least a total of Php 584,545,848.98 by 2030.
- **Digital Engagements:** To grow all social media accounts by 100,000 followers, with a 10% increase in total engagements, averaging at 70 reactions per post.
- **In-store Traffic:** To boost the number of store visitors, garnering an average of 260 transactions per store every month.

D. Long-term objectives (March 2031 to February 2036)

- **Sales:** To increase Mossimo's net sales by 10% from a total of Php 584,545,848.98 by 2030 to at least Php 643,000,433.88 by the end of 2036.
- **Digital Engagements:** To significantly increase Mossimo's digital presence by growing the brand's social media following to atleast 150,000 followers while also increasing engagement levels by 15% to an average of 100 reactions per post across all of Mossimo's platforms by 2036.

- ***In-store Traffic:*** To increase in-store traffic by approximately 12% from an average of 260 transactions per store per month to an average of 291 transactions per store per month by 2036.

VII. Marketing Mix and Strategies

A. Market Targeting

Size of New Market

According to the Philippine Statistics Authority, the population of the National Capital region (NCR) as of July 1, 2024, is 14,001,751, exhibiting an annual population growth rate of 0.91% in the years 2020-2024 (2025). The region is projected to have a population of 14.49 million by the year 2035 (Austria, 2026). Based on the calculations of the Philippine Institute for Development Studies, 12.4% of Filipino households fall in the middle income class, while 4.0% fall in the upper middle income class (Cabalfin et al., 2026). With this, the total percentage of Filipino families residing in NCR that are categorized as middle income to upper middle income earners is 16.4%, representing the target market of Mossimo. Based on the 2015 census for the population by age group in NCR, the following age groups comprise the respective percentage of the population: 15 to 19 at 9.74%, 20 to 24 at 10.48%, 25 to 29 at 9.82%, and 30 to 34 at 8.58%. Given these percentages, it may be estimated that the target market population of Mossimo Philippines represents 38.62% of the population of NCR. The utilization of the broader range of 15 to 34 year olds, instead of the primary 18-34 target provides a broader and more comprehensive market estimate of individuals that are Gen Z and Millennials. These significant were used to obtain the total estimated new market size by multiplying the population of NCR in 2024 (14,001,751), to the percent of middle to upper middle income earners (16.4%), and further to the percent of 15 to 34 year olds (38.62%).

Data	Population/Percentage
National Capital Region (2024)	14,001,751
Middle to Upper Middle Income Class	16.4%
15 to 24 Age Group Percentage in NCR	38.62%
Total Estimated New Market Size <i>(14,001,751*16.4%*38.62%)</i>	886,826

Table #9. Estimated New Market Size in NCR

Target Market Segmentation

Demographic	Geographic
- Age: Gen Z (18–34 years old). - Occupation: College students, interns, and active young professionals. - Social Class: Middle to Upper-Middle (Classes B to Upper C). - Profile: Academic-to-professional transitioners needing versatile apparel.	- Region: Metro Manila, Philippines (Urban). - Key Hubs: Manila, Alabang (Festival Mall), and Quezon City (SM North EDSA/Fairview). - Focus: High foot traffic areas and major supermalls.
Psychographic	Behavioral
- Values: Value-consciousness, practicality, and financial responsibility. - Criteria: Affordability, durability, and functionality. - Lifestyle: Urban routines (commuting, cafes, malls) and high online engagement. - Mindset: "Easy styles" over high-end labels; a signal for career readiness.	- User Segments: Budget-conscious students (sales-driven) and loyal professionals (daily users). - Usage: Regular daily activities, relaxed socializing, and minor athletic activities. - Digital Behavior: Shops for brand collaborations to share on social media. - Commitment: Ranges from brand advocates to occasional "special sale" shoppers.

Table #10. Segmentation of the Target Market in Metro Manila

The Personification of the New Target Market

New Target Market Profile		
Demographic		
<i>Name</i>	Ashley Bernardo	
<i>Age</i>	24	
<i>Residence</i>	Quezon City, NCR, Philippines	
<i>Educational Background</i>	Bachelor of Science in Hospitality Management	
<i>School</i>	University of Santo Tomas	
<i>Occupation</i>	Hotel Front Office Manager	
<i>Monthly Income</i>	Php 76,000	
<i>Civil Status</i>	Single	

Ashley Bernardo is a 24-year-old who graduated from the University of Santo Tomas with a Bachelor of Science in Hospitality Management. She is a Front Office Manager residing in Quezon City, who has a monthly household income of Php 76,000, belonging to the young urban professional segment with moderate purchasing power. Given that she's an early talent in the hospitality industry, she is financially independent but remains mindful of value-for-money purchases.

Psychographic

As a professional with a focus on her career and an active social life, she seeks clothing that conveys both confidence and meticulousness. Although casual fashion remains important, she is slowly integrating more elements like color, patterns, and structure into her wardrobe, alongside some denim for continued comfort. This is to achieve a casual yet elevated look that merges professional demands with personal style.

Behavioral

Ashley purchases clothing every one to two months, especially during promotional periods or seasonal releases. Her buying decisions are influenced by fabric quality, fit, versatility, and overall aesthetic appeal and is more likely to purchase statement items that remain wearable and practical. She prefers apparel that can transition easily from work environments to casual social settings and engages with brands through social media platforms and frequents shopping malls within her area. Her brand loyalty increases when products consistently deliver both style and durability.

B. Proposed Big Idea

Consumer Insights

The following insights have been gathered from the UAI survey, encompassing what consumers think about Mossimo as a clothing brand:

- 67.1% of participants think of the brand as “Casual and Comfortable”
- 60.5% believe that Mossimo is “Trendy and Fashionable”
- 44.4% of them view it as “Youthful and Modern”
- 43% of participants consider it as “Affordable yet (able to provide them with) good quality.”

Product Truth

Under Mossimo’s strengths, its **strong brand heritage** and **international renown** serve as key pillars for the brand’s messaging. Specifically, it exudes Mossimo’s product truths of providing durable clothing and heightened product quality befitting consumers’ lifestyles.

Big Idea

<i>Basic Big Idea</i>	<i>Refined Big Idea</i>	<i>Polished Big Idea</i>
“With Mossimo, I can comfortably and fashionably maintain my modern lifestyle because their clothing is of good quality and has high durability.”	“With Mossimo, my clothes can keep up with my lifestyle and personal fashion. preferences”	<i>“Clothes that Keep Up”</i>

Table #14. Big Idea

“Clothes that Keep Up” is a message that refers to two things associated with Mossimo. First is the lifestyle of their target consumers, which can be quite busy, leaving them with little

room to dress themselves as they wish. Secondly, it refers to how others may view Mossimo to be an old brand. The message clearly states that Mossimo is ready to change with the times, but still deliver the same great quality that has granted it brand loyalty over the years. The brand caters to those who are often looking for apparel that can keep them comfortable during their busiest hours, without having to compromise their personal style and appeal.

C. Product Development/Innovation Program

Unique Selling Proposition

Mossimo's existing sizes, ranging from Small to Extra Large, do not accurately reflect the diverse body proportions of its customers. In response to this limitation, Mossimo's product development and innovation program has focused on the creation of an adjustable clothing line. This line directly addresses real customer concerns regarding the inclusivity of Mossimo's clothes and the challenges of size inclusivity in contemporary fashion as a whole. Instead of relying solely on traditional fixed sizes, the new collection offers flexible-fit garments that cover multiple size ranges in one piece that is measured in inches. The unique selling proposition of this line lies in its adaptive sizing system, wherein Mossimo redefines how sizing works by *offering clothing that adjust to those who wear it and not the other way around*. This accommodates a broader range of body types and acknowledges the common reality of body fluctuations, such as weight changes and temporary bloating. By allowing a single garment to adapt, Mossimo reduces the need for frequent clothing replacements and also promotes inclusivity and comfort, increasing market accessibility and customer satisfaction.

Product Positioning

For the active Filipino lifestyle, Mossimo's FlexiFit Collection presents a must-have, sophisticated clothing choice. It emphasizes the reality of the human form, turning ordinary clothing into a responsive partner that fits physical changes (such as weight variations and daily bloating) guaranteeing that the garment fits the user rather than forcing the wearer to adhere to a fixed size. Mossimo redefines inclusion and comfort as basic components of contemporary style by going beyond conventional fixed sizing (S–XL) to an adaptive sizing approach.

Designed for the selective young consumer who values authenticity and durability, this collection transforms "casual and comfortable" clothes into a long-term investment that

withstands fashion trends and physical changes. More than a clothesline, it's a dedication to market accessibility and functional empathy in the Philippines. Using its flexible-fit technology, Mossimo becomes a brand that really keeps up with the hectic, varied lives of its consumers, guaranteeing every person feels valued and every garment remains a lasting essential.

Product Features

Mossimo's FlexiFit clothing line is proposed to utilize features that are designed to adapt to changing body shapes and sizes, as well as to enhance comfort and longevity of use. By doing so, these garments will be beneficial for accommodating weight fluctuations as each piece are designed to accommodate a range of sizes.

Features	Specifics
Adjustable Fasteners and Mechanisms	● Use of elastic waistbands that are hidden in the clothing to allow the waist to be tightened or looseness ● Incorporation of drawstrings and ties to design elements to create a custom fit ● Use of button snaps and straps to create non-permanent tightening or loosening of garments
Fabric Technology	● Use of stretchy fabrics like spandex or jersey knit to allow the material to fit different body types while remaining shape ● Utilizing knitted or ribbed fabrics for a more natural and comfortable stretch ● Wrap designs to make garments adjustable to the wearer ● Utilizing cotton-linen for breathable and lightweight garments suitable for Philippine weather
Innovative Cutting and Construction	● Inclusion of hidden pleats and excess seam allowance to provide extra fabric for flexible sizing ● Reversible designs that add versatility and allow for various wears

Table #15. Features of Mossimo's FlexiFit Clothing Line

Bottoms

Figure #5: Sample Adjustable Trousers

It is proposed that Mossimo's FlexiFit line would include bottoms that are able to accommodate a wide range of sizes. An example of a garment under this line would be a unisex pair of trousers that features loose pleats in the front with a tie strap at the waist within belt loops. The adjustable ties are used to customize the fit of the waistband on the wearer, while the pleats will be used to expand the waist band or tighten by folding inwards. With this design, 4 sizes will be available to accommodate different size ranges as mentioned previously. The sizes are as follows: extra small (22 to 28), small (28 to 34), medium (34 to 40, and large (40 to 46).

Figure #6: Sample Adjustable Wrap Skirt

Additional to the variety of bottoms would be an adjustable wrap skirt. This wrap skirt is a garment that can fit a wide variety of sizes through the use of buttons that can be clipped to match the desired waist size of the wearer. The fabric panels are then wrapped around the waist and secured with a long strap, suitable for multiple waist sizes. The adjustable wrap skirt will be available in the same sizes as the adjustable trousers.

Tops

Figure #7: Sample Adjustable Button Up Shirts

Under the innovation line, Mossimo's Premium Tops will include button up tops that have adjustable fasteners and mechanisms on both sides of the garment. As presented above, one example utilizes straps that can be fastened to accommodate bigger or smaller torso sizes. Optionally, this may be left untied, adding dimension to the garments design. Another sample design with similar purpose would be the use of straps of fabric with clasps or buttons in order to cinch the fabric to better fit the wearer. These designs both feature innovative construction with extra fabric, allowing for a more versatile use of the garment.

Dresses

Figure #8: Sample Adjustable Wrap Dress

Adding variety to the design samples, an adjustable wrap dress design is proposed to provide more options for clothing pieces. This design is created by utilizing two different panels of cloth which are attached together with the dresses shoulder straps. By including open slits on both sides of the dress, each panel (front and back) is able to be tied with a strap on both the front and back portion of the dress. This creates the custom fit of the dress on each wearer, accentuating their natural figure. Furthermore, this dress design is also proposed to have a reversible style of fabric, where one side showcases a neutral colored material while the other a bold pattern.

D. Pricing Program

The adjustable collection clothing line is priced higher by about 30% than regular Mossimo items since production costs are expected to be higher given the increased fabric usage and complexity of added construction of the clothes. Since Mossimo also outsources their clothes internationally, specifically from China, additional freight, custom duties, and logistics costs increases the total landed cost per unit. As such, cost-based pricing will be applied so that all production and operations expenses are covered while still maintaining profitability. The adjustable clothing line also delivers greater value through its features, such as size flexibility, customization, and longer usability. This makes the clothing more practical given that consumers can use it for long periods of time, justifying the premium pricing of the product through value-based pricing.

Pricelist	
Adjustable Trousers	Php 2,390
Adjustable Wrap Skirt	Php 2,190
Adjustable Button Up Shirt	Php 1,990
Adjustable Wrap Dress	Php 2,890

Table #16. Mossimo's Flexifit Clothing Line Pricing

Even though the pricing will not remain within the acceptable price range as a mid-range brand and not fall within the identified spending range, based on the focus group discussion (FGD) and survey results wherein participants indicated that their clothing budget ranges from ₱500 to ₱2,000 per item, the adjustable clothing line will line compete on adaptability and long-term cost efficiency.

E. Sales and Distribution Program

Mossimo currently utilizes physical and digital platforms to distribute their products through an omnichannel approach. This includes distributing through mall shops, department stores, e-commerce platforms such as Shopee, Lazada, TikTok Shop, and their own website.

Physical Touchpoints

The distribution channel most used by consumers are Mossimo's physical stores. With its 92 retail locations, the brand has the ability to offer its newest product development

nationwide. However, it would be most beneficial to limit the flexible-fit clothing line during its initial release to the following three branches: SM North Edsa, SM City Fairview, and Festival Mall. The locations are chosen with consideration that the marketing for 2027 will first be applied within NCR. Additionally, foot traffic volume, accessibility, and product turnover rates were considered in choosing these three outlets.

In preparation for the new product line, the selected stores will be adjusted to have a section dedicated to the flexible-fit clothing line. The ideal space allotted for the collection should include a portion of the wall display and at least one large display rack. Signages stating the collection's name and intentions must also be strategically placed near the section, highlighting its stance as a new arrival. Utilization of department stores for the new line is to be avoided during its first year of release, as a different entity controls the distribution for department stores.

Digital Touchpoints

Since Mossimo's goal is to improve traffic in physical stores, distribution amongst the brand's available digital channels are to be limited as well. The flexible-fit clothing line should be visibly seen and be available for purchasing on the Mossimo website. This strengthens its image of being exclusive to select Mossimo stores and pushes consumers further to try the products on at said physical outlets. The digital touchpoints for the line will mostly be utilized during sales promotions, featuring exclusive online discounts where customers can purchase the line for less after fitting them at stores.

F. Marketing Communication Program Awareness

Out-of-Home Media (OOH)	
Type	Billboard
Objectives	To increase brand visibility and awareness by exposing the campaign message in high-traffic public locations
Description	Billboards and banners displaying the campaign's key visuals and message, installed in high-traffic areas such as major roads and commercial districts to maximize exposure to a wider audience.
Channels	Along North Edsa and on mall exterior.
Duration	Jan 2027-Feb 2027 (Campaign Billboard) ; 1st Week of March, July, and November

	(Banners)
Consumer Insights	Young professionals and students travelling through the urban areas for work, school, or a daily activities increases the likelihood of noticing the visually engaging billboards and banners.
Rationale	An effective way to reach a wider audience during their daily routine, repeatedly exposing the brand message by placing them in strategic locations, strengthening brand recall and awareness.

Execution

Billboard	
Sample Mock-Up	Year-round
	

Banner

	Time	Sound Design (SFX)
	0:00 – 0:05	[Open Spaces] Wind ambience. A distant hawk. Soft natural atmosphere.
	0:05 – 0:08	Light fabric rustle. A slow, relaxed exhale.
	0:08 – 0:12	Subtle transition swell building into movement.
	0:12 – 0:17	[In-Between Spaces] Train arriving. Rhythmic footsteps on concrete. Urban hum fades in.
	0:17 – 0:21	Low, steady bass begins. Controlled, driving beat underneath VO.
	0:21 – 0:24	City noise softens as a heavy door closes. Transition to warm indoor tone.
	0:24 – 0:27	[Gathered Spaces] Soft lo-fi keys. Ice clinks in a glass. Faint laughter in background.
	0:27 – 0:29	Music builds into clean, modern Mossimo brand theme.
	0:29 – 0:30	Final sharp beat / sonic logo hit.

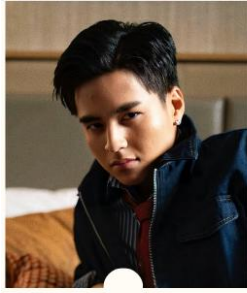

Table #17. Awareness Strategies

Interest

Short Form Videos	
Type	Tiktok and Instagram Reels
Objectives	To engage target audience and spark interest into Mossimo's products through showcasing its real-life usage, styling tips, and relatable contents.
Description	Tiktok or Instagram reels that features fit-checks, styling ideas, or lifestyle contents of students or young professional wearing Mossimo Apparel to encourage them to explore and try the brand further.
Channels	Tiktok and Instagram
Duration	Videos will range from 15 to 60 seconds in length, with two videos published per week throughout the brand's seasonal campaign periods.
Consumer Insights	Students and young professional are highly active on social media, heavily influenced by visuals of how a product can be used or styled in everyday life which can sustain their interest.
Rationale	By demonstrating how products can be used or styled, Mossimo can strengthen connection with its target market, encouraging them to further explore and consider the brands product.

Execution	Short Form Video Sample
Broadcast Media	
Type	Television Commercial
Objectives	To visually establish Mossimo as a premier lifestyle brand by showcasing apparel versatility across diverse urban and nature-centric settings.
Description	A high-contrast cinematic spot transitioning from sun-drenched highways and open fields to fast-paced corporate environments and vibrant nightlife. The narrative emphasizes seamless adaptability through shifting lighting, energy, and locations.
Channels	Television (Major Networks) and Social Media (YouTube/Instagram)
Duration	Jan 2027-Feb 2027
Consumer Insights	Dynamic individuals view their clothing as an essential tool for self-expression that must perform equally well in professional, social, and private settings.
Rationale	Rapid visual transitions and sharp shifts in atmosphere—from ambient nature to high-energy city life—physically demonstrate the product's adaptability to any pace or space.
Execution	
• CLOSE-UP/MEDIUM SHOT • REACHES FOR A GEAR SHIFT OR ADJUSTS THE MIRROR.  • A SUDDEN CUT TO A WIDE, ETHEREAL SHOT • AMBIENT SOUND OF A RUSHING ENGINE FADING INTO THE SOFT RUSTLE OF WIND THROUGH GRASS.  • FAST-PACED WALK • CLEAN, CORPORATE, AND HIGH-ENERGY • THE COOL DAYLIGHT FROM THE WINDOWS CONTRASTS WITH THE WARM, BUSY ENERGY OF THE OFFICE INTERIOR.   • SIDE-ANGLE CLOSE-UP TRAVELING DOWN A STRAIGHT, SUN-DRENCHED HIGHWAY. • FOCUS IS SHARP ON THE REFLECTION IN THE MIRROR, CREATING AN INTIMATE CONNECTION  • A WIDE, CINEMATIC SHOT OF A WOMAN STANDING IN A VAST, TEXTURED FIELD • CENTER OF THE FRAME HIGHLIGHTING CLOTHES  • A TRACKING SHOT • SHE'S MOVING WITH PURPOSE. • CATCHING THE SUBWAY	

• A CENTERED, MEDIUM CLOSE SHOT • LEANING AGAINST A GREEN STRUCTURAL PILLAR ON A SUBWAY PLATFORM. • MOODY AND URBAN, WITH WARM, LOW KEY LIGHTING			• A MEDIUM WIDE SHOT OF A WOMAN STANDING INSIDE A BRIGHTLY LIT, MOVING SUBWAY CAR • HIGH TRAFFIC URBAN SETTING
• A WIDE SHOT OF HER WALKING DOWN A CITY STREET AT BLUE HOUR • SHE'S STILL IN THE SAME OUTFIT, BUT THE VIBE HAS SHIFTED FROM "WORK" TO "FREEDOM."			• A WARM, LOW LIT BAR SCENE. • CITY TRAFFIC AT A DISTANCE, FOLLOWED BY THE WARM CLINK OF GLASSES AND MUFFLED LAUGHTER.
• MEDIUM WIDE INTERIOR SHOT OF AN INTIMATE EVENING GATHERING IN A COZY, WELL LIT APARTMENT • SOFT, AMBER LIGHTING CREATES AN INVITING AND CELEBRATORY MOOD			• A MEDIUM LONG SHOT VIEWED THROUGH A LARGE, GLOWING WINDOW OF A MODERN HOUSE OR LOFT AT NIGHT • THE LIGHTING IS CELEBRATORY – WARM, GOLDEN, AND KINETIC.
			
END FRAME: BLACK OUT + INSERT MOSSIMO LOGO AND TAGLINE			
Public Relations Marketing - Influencership and Content Creation			
Type	Static Posts, Stories and Reels		
Objectives	To maintain brand presence through high-quality visual storytelling and drive physical traffic to seasonal activations		
Description	A tiered influencer program featuring core ambassadors for year-long storytelling and seasonal guests to hype specific events.		
Channels	Tiktok and Instagram		
Duration	Continuous seasonal rotations: March to June (Summer Collection), July to October (Fall Collection), and November to February (Holiday Collection) with 5 CC's/ season		
Consumer Insights	Netizens ignore obvious ads but engage with "day-in-the-life" content that shows clothes functioning in professional and social urban settings.		
Rationale	Uses social proof to validate Mossimo's lifestyle shift, ensuring the brand remains relevant in digital spaces where the target market spends the most time.		
Execution

TIKTOK: 134.1K

The execution leverages a narrative-driven approach, positioning influencers as visual guides through the city's evolving landscape. By balancing Macro-Influencers for broad reach and Niche Stylists for aesthetic credibility, the campaign creates a digital lookbook that transitions from high-energy summer prints into the technical textures of fall, concluding with the denim-focused communal spaces of the holiday season.

Influencer Tier Breakdown		
Core (3-5 pax)	High-end lifestyle models/creators.	1 Long-form Reel per season + monthly Lookbook posts.
Seasonal (10-15 pax)	Event-specific hype creators.	3 IG Stories/Posts + 1 TikTok

		dur ing the Su m me r Oa sis or Ni ght Ma rke t.
• Summer: Influencers showcase bright & bold content filmed in high-sun, outdoor locations, highlighting the vibrant colors and prints of the Summer collection. • Fall: Creators document the urban daily hustle in transit areas, focusing on the mix of clothing textures and how to style them into professional, wearable pieces. • Holiday: Influencers film celebration & connection content at the Night Market showcasing the different collections and archives of the brand. • The Clearance Vault Steal Guide: Influencers demonstrate how to pair archive clearance finds with new seasonal prints or denim to create high-low fashion looks.		

Table #18. Interest Strategies

Desire

Public Relations Marketing - Celebrity Collaborations	
Type	Partnership and Collaborations
Objectives	To secure a collaboration with a local pop artist that will help spread awareness for both parties involved To gain local music artists as ambassadors for Mossimo
Description	Mossimo is to collaborate with the newly debuted P-Pop girl group of Universal Records Philippines, FINA. From this collaboration, a small collection shall be designed by the members of the group, with the collection being released as official fan merchandise. Additionally, this collaboration would entail that FINA be ambassadors for Mossimo, featuring pieces from the brand either on their social media or during performances. FINA will also be in attendance during Mossimo's holiday event, featuring exclusive backstage access for winners of the Digital Showcase competition.
Channels	Social Media, Mossimo Events
Duration	July 2027 to June 2028
Consumer Insights	Mossimo is to collaborate with the newly debuted P-Pop girl group of Universal Records Philippines, FINA. From this collaboration, a small collection shall be designed by the members of the group, with the collection being released as official fan merchandise. Additionally, this collaboration would entail that FINA be ambassadors for Mossimo, featuring pieces from the brand either on their social

	media or during performances. FINA will also be in attendance during Mossimo's holiday event, featuring exclusive backstage access for winners of the Digital Showcase competition.
Rationale	Based on the survey results, women purchase more frequently than men. Additionally, a great number of respondents also voted to see more collaboration collections. During the FGD, one respondent noted that it would be best to see Filipinos modelling Mossimo pieces as well. The members of FINA perfectly encapsulate Mossimo's target audience. Mossimo's collaboration with them can potentially rival other brands' use of celebrity endorsers such as BINI and SB19. As this marketing plan is set in 2027, utilizing rising artists like FINA is a more logical strategy than using current popular artists as trends may change in the upcoming year. With the group's image envisioning a "modern Filipina," they are also the top choice to model Mossimo from a consumer basis.
Visual Aid	
Public Relations Marketing - Local Artist Collaborations	
Type	Partnership and Collaborations
Objectives	To provide an avenue for local artists to showcase their work through Mossimo To broaden Mossimo's consumer base by utilizing local artists' fanbases
Description	A collaborative collection is to be released to provide a smooth transition in between seasons featuring local artists and their illustrations exclusively created for the release. It will be a minimal collection involving graphic shirts, caps, bags, and other items depending on the agreement set with the partner artist, much like Schnozy. A total of 5 to 8 pieces will be released to the public. For this specific marketing plan, it is recommended to collaborate with one artist: Alyssa De Asis for the month of May, as the illustrators art style best pairs the transition between Summer to Fall, while simultaneously catering to 2027's fashion forecast.
Channels	Social Media, Physical Stores
Duration	May 2027 to June 2027
Consumer Insights	The Schnozy collection garnered many positive comments from the FGD participants. One of them stated that similar collaborations move Mossimo one step closer to be desirable to Generation Z.
Rationale	Seasonal Transition Collaborations allow Mossimo to explore different directions, removing limitations set by on-going marketing campaigns. Additionally, collaborations with local artists improve brand image and awareness, introducing Mossimo to the partner artists' community and the partner artist to Mossimo's

	consumer base.		
Execution			
Other suggestions if year-round	 Summer (June 2027) Paulina Almira (@paulinaalmira), 56.9K followers on Instagram	 Fall (September 2027) Kenny Tai (@kentai.jpg), 2,806 followers on Instagram	 Holiday (March 2027) Alyssa De Asis (@alyssadeasis), 4,659 followers on Instagram

Table #19. Desire Strategies

Action

Year-Round Clearance Rack	
Type	Sales Promotions
Objectives	To leverage pricing as a decision-making factor among Mossimo's target audience
Description	Mossimo is to have a dedicated clothing rack for unsold items from previous seasons at discounted prices. Discounts range from 20% off to 80% off, depending on how far back the item was released. This is to be strategically placed near the counter for it to be easily-seen and considered during check-outs.
Channels	Physical Stores
Duration	March 2027-March 2028
Consumer Insights	Both survey and FGD responses show that lower prices are a large decision-making factor considered by consumers before proceeding with a purchase.
Rationale	The presence of a year-long clearance rack allows customers to know that certain items are on sale without having to announce extensive sales promotions. It would

	also attract first-time buyers who might be discouraged to purchase items at full price during their first transaction.
Events Marketing - SUMMER	
Type	Pop-Up Activation Booth (Mossimo's Urban Oasis)
Objectives	Drive seasonal sales and brand engagement by positioning Mossimo as a fun clothing summer hub across Metro Manila
Description	A mobile, industrial-luxe pop-up featuring a Coffee station, a live DIY Lab for garment customization, and curated DJ sets that provide a literal oasis from the city's summer heat.
Channels	On-site Activation, TikTok/Instagram Live, and Geo-targeted Social Ads (5km radius of each site).
Duration	4th Week of April (3-day weekend activations)
Consumer Insights	Metro Manila residents seek physical escapes from the intense summer heat within their daily urban routines and value exclusive, personalized products for social media sharing.
Rationale	Connects the brand with physical comfort while tapping into the desire for self-expressive streetwear.
Execution	 • Main Stage: A dense showcase of the Summer Collection on minimalist black metal racks, centered on the truck's faux-stone platform. • Mossimo Coffee Bar: A modern, minimalist booth attached to the side of the truck serving curated iced brews (e.g., matcha latte / Spanish latte) to keep guests refreshed while they browse. • DIY Lab: A dedicated station where customers can get live-customized Metro Manila city-prints or heat-press patches on their new Mossimo purchases. • DJ Booth: Providing upbeat and lively music to attract foot traffic.
Promotional Contest - FALL	
Type	Digital Showcase (Rhythm of the City)
Objectives	Generate mass brand awareness and high-quality UGC by turning customers into urban icons.
Description	A digital photography and modeling competition showcasing the versatility of the Fall collection.

Channels	Instagram & TikTok using a dedicated hashtag (e.g., #AdapttotheAgenda).
Duration	August to September 2027 (4-week submission period).
Consumer Insights	Professionals take pride in their hustle and seek clothing that looks cinematic in both corporate and social spaces.
Rationale	Scales the concept beyond a single venue, allowing the community to define purposeful movement.
Execution	 • The Prizes & Incentives: Grand Prize: A ₱20,000 wardrobe shopping spree and exclusive meet and greet access with FINA. • Weekly Winners: Urban Survival Kits containing Fall pieces and a curated Work-to-Bar accessory set (e.g., sleek laptop sleeve and a premium cocktail kit).  • Special Category: Mossimo's Best Look awarded to the entry that best captures a professional, high-fashion aesthetic in an urban setting.
Events Marketing - HOLIDAY	
Type	Premium Night Market & Experiential Event (Manila Soul)
Objectives	Finalize the year with a high-conversion physical event that rewards loyalty and reinforces brand lifestyle.
Description	A curated evening outdoor market featuring modular seasonal pods, live art, and the showcase of Mossimo's Holiday collection
Channels	Physical Event (Outdoor), Static Posts, Tiktok and Instagram Story Takeovers.

Duration	December 2027
Consumer Insights	Shoppers in 2027 value steady, sale-driven patterns but are willing to spend on cross-category bundles and exclusive gift kits.
Rationale	Positions Mossimo as a lifestyle curator by providing a calm, organized shopping environment during the peak holiday rush.
Execution	 • Modular Pods: Four glass-and-steel stalls showcasing the year's best collections (Summer, Fall, Holiday, and Core). • Live Customization: On-site artists providing garment painting or embroidery for one-of-one holiday gifts. • The Gift Kit: Official launch of the final holiday box, featuring a custom scent, the magnetic card holder, and a limited-edition tee. • Live Stage: Headline performance by FINA and a lineup of local indie artists to drive foot traffic and engagement. • The Vault (Clearance): A dedicated, sleekly designed section offering exclusive discounts on excess Mossimo inventory to optimize year-end stock levels.
E-Commerce Ads	
Type	E-commerce ads (Shopee, Lazada, and Tiktok Shop)
Objectives	To drive direct purchase of Mossimo products and convert awareness and interest into measurable sales.
Description	Product listings feature images, description, and prices with promos or discounts to encourage purchase.
Channels	Shopee, Shopify, Lazada, and Tiktok Shop
Duration	January 2027 to January 2028 updated with seasonal collections and promos.
Consumer Insights	The target market prefers online shopping for convenience and is easily motivated by discounts and promotions.
Rationale	Products are ready to buy online, making it easy for the consumers to buy and drive sales.

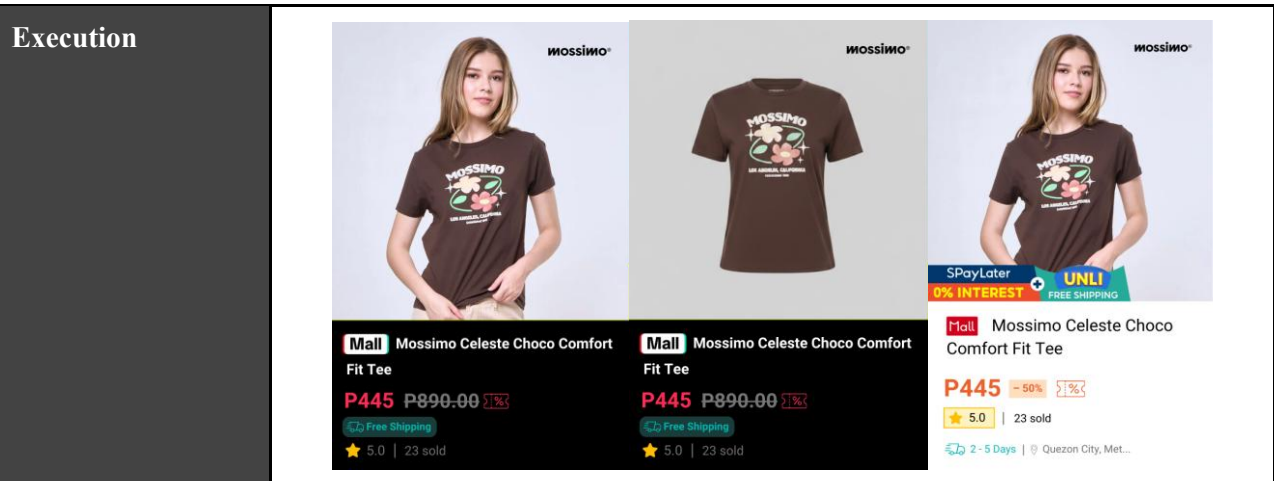

Table #20. Action Strategies

Figure #9: Full 2027 to 2028 Marketing Campaign Gantt Chart

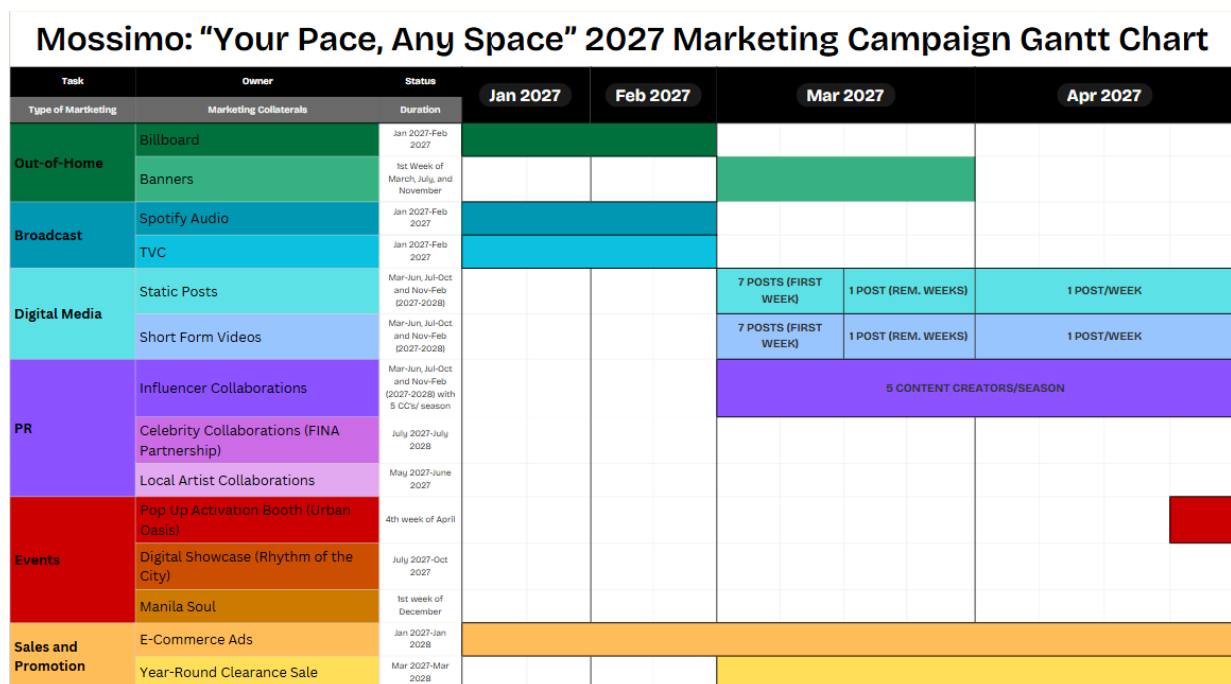

Figure #10: 2027 Marketing Campaign Gantt Chart (January to April)

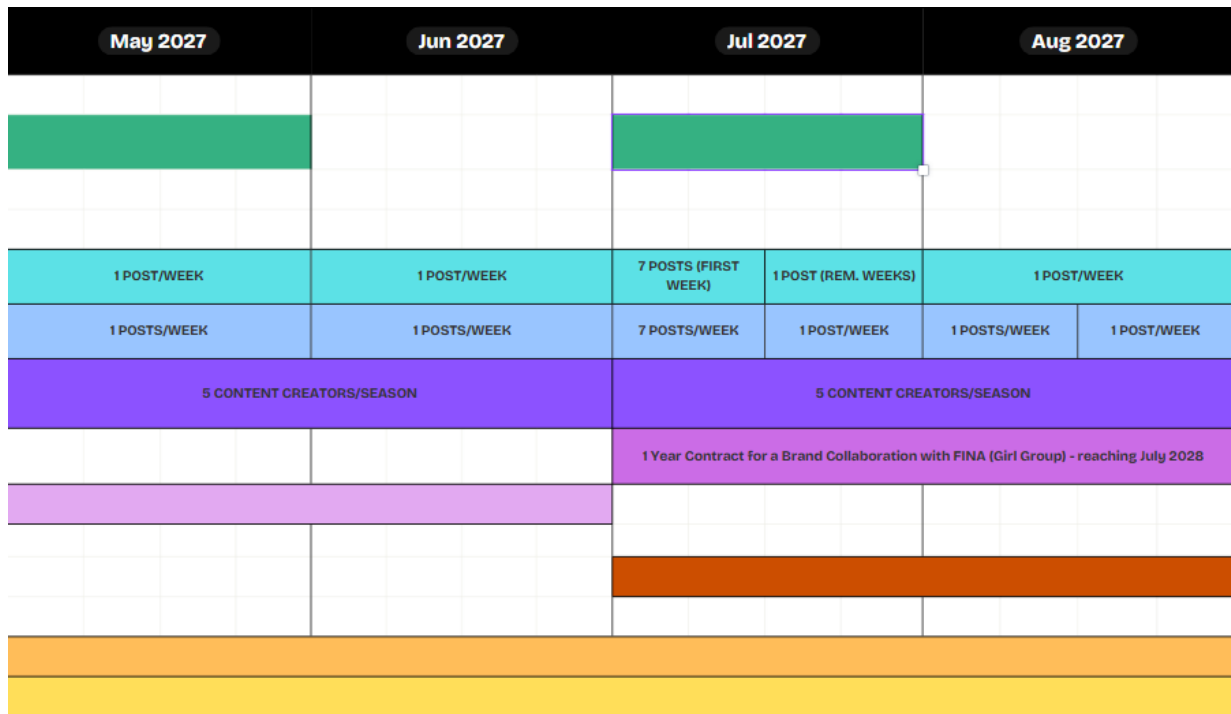

Figure #11: 2027 Marketing Campaign Gantt Chart (May to August)

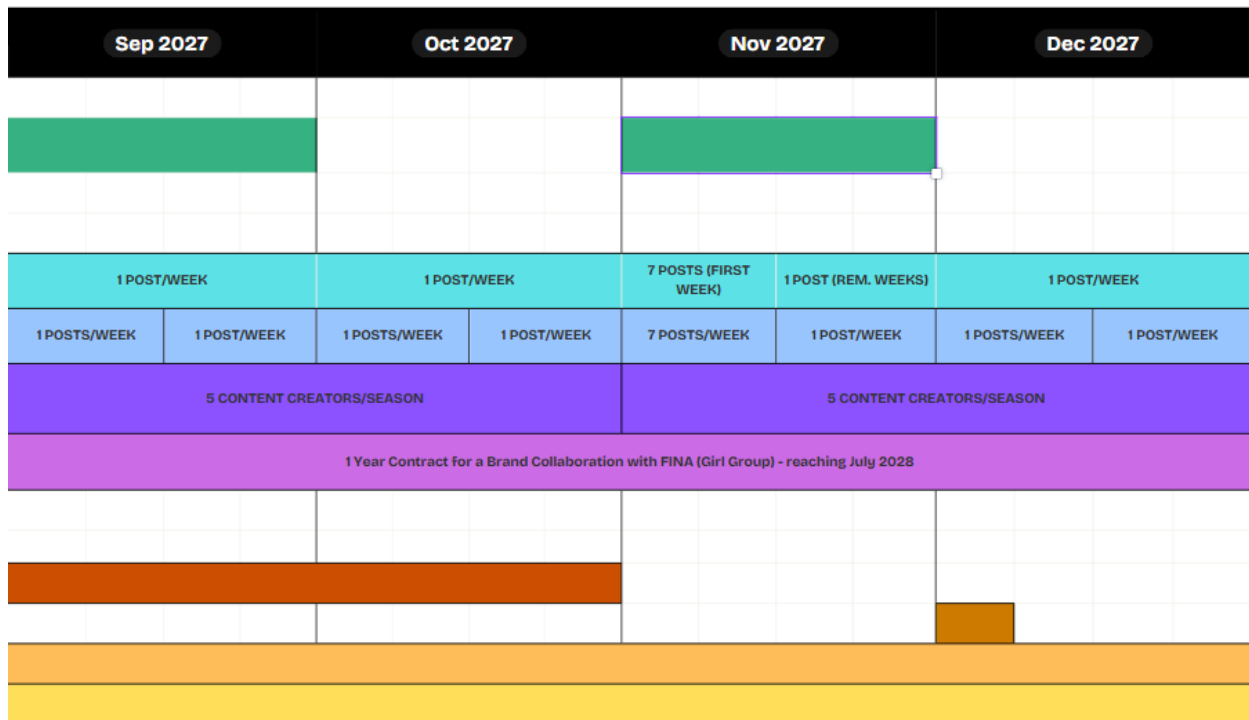

Figure #12: 2027 Marketing Campaign Gantt Chart (September to December)

customer journey both on physical and digital touchpoints. This will guide how customers discover, explore, and purchase Mossimo Products.

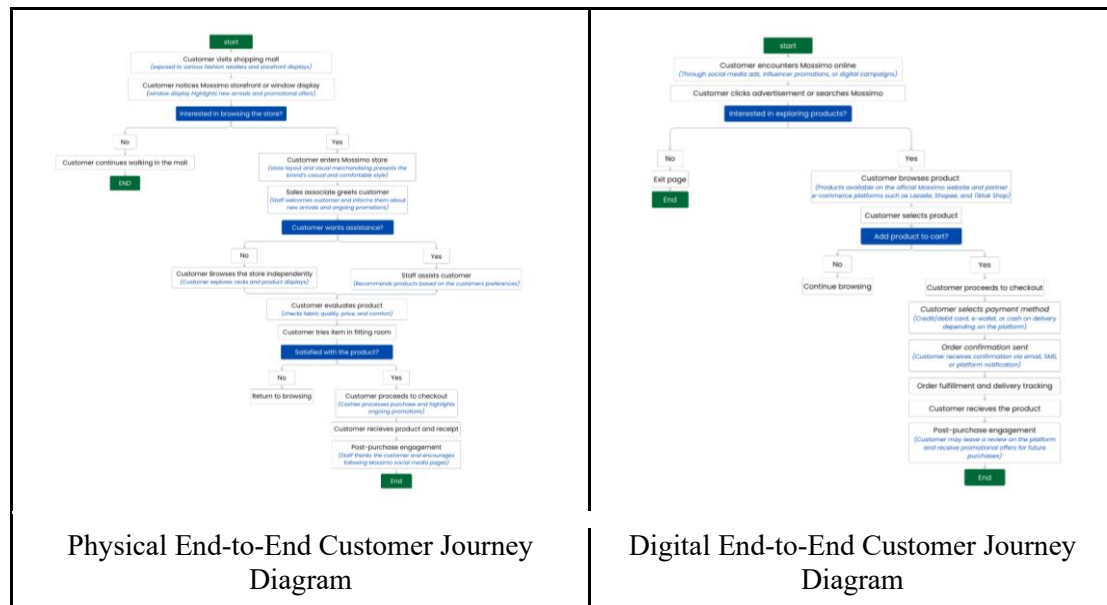

Table #21. End-to End Customer Journey Diagram

The physical end-to-end customer journey shows how customer interacts with Mossimo In-store, from seeing the storefront window display to browsing products, trying items, and completing their purchase. The digital end-to-end customer journey, on the other hand, illustrates how a customer discover and purchase Mossimo products from product browsing, check out, payment, and delivery through their online platforms such as the official website, Lazada, Shopee, and Tiktok Shop. Overall, these processes ensure that Mossimo delivers a smoother and consistent brand experience across all touchpoints, helping strengthen customer engagement and increase purchase likelihood.

I. Physical Evidence Program

Based on the responses received from the UAI survey, a number of the participants noted how minimalist, clean, and modern the store layout of Mossimo is. This may be attributed to the on-going roll-out of improved visual display found at primary star locations. However, some respondents noted that while the store layout was much improved, it also felt similar to other brands, being that it was generic looking, and that the Mossimo store felt cramped. A number of respondents felt that they had difficulty in browsing the product selection due to limited space and narrow passageways due to overfilled hanger displays.

In addressing this matter, a proposed physical evidence program aims to highlight Mossimo’s rebrand and distinct identity as a brand that provides garments that are fit and stylish for any occasion.

Window Display		
Summer	Fall	Holiday
		

Table #22. Physical Evidence: Window Display

With the 3 seasons of Mossimo’s clothing, it is proposed that a different window display will be showcased every season. The window display for summer will show the tagline “Loud in the open” and the vibrant colors and patterns used in the garment designs for the season. In the fall season, the window display would then pivot to a more urban environment and have a color palette that includes darker colors that highlight the textured clothing pieces and different materials. This window display will showcase the adjustable button up shirts and adjustable wrap skirts. Lastly, the holiday window display would highlight the tagline “Woven Together” and emphasize the denim garments of Mossimo in a manner that displays how it can be worn in gathered spaces. In this season, the adjustable clothing trousers will also be highlighted in relation to the focus on the brand’s jeans and denim products.

Store Layout	In-Store Advertisement
--------------	------------------------

Table #23. Physical Evidence: Store Layout and In-Store Advertisement

Furthermore, the proposed store layout utilizes a more inviting design that is spacious and organized, with the different garment sections clearly divided and labelled with lit signages. The overall layout creates a more functional shopping experience, with the path directly leading the eye-line to the counter, encouraging conversion of shoppers. By utilizing back light and indirect lighting, a more modern and warm ambiance is created that can attract youthful and contemporary shoppers. The digital assets created per season will be displayed through in-store advertisements, anchored on printed posters and television screens. These in-store advertisements will be changed in adherence to the current season of Mossimo and will be updated regularly to emphasize the campaign for the season. These store layouts and in-store advertisement proposals will provide Mossimo with flexibility in executing each season while providing a distinct and identifiable identity for the brand.

VIII. Investment Plan

Item	Unit Cost	Specifics	Total
Product Innovation

Figure #9: Projected P&L for Mossimo (2024-2027)

The figure above showcases the predictions for the years of 2026, 2027 with the program, and 2027 without the program. As the basis of the financial statements were for the year 2024 to 2025 only, which ended in a loss, all the predictions follow a declining trend. With the plan, net sales are predicted to increase by 5%, amounting to Php 519,390,121.19. To accommodate the new amount of net sales, the cost of sales were also increased by 5%. Despite this, the increase in net sales still manages to cover the cost of sales and the additional costs of the marketing plan as seen in how the net loss for the year decreases during 2027 with the plan. Although the year still ended in a loss, there is a significant

improvement in the financial statements as the plan is foreseen to lessen losses by Php 2,463,999.22, or 11.16%. This is obtained by deducting the final net loss of 2027 without the proposal and the final net loss of 2027 with the proposal.

	2027 w/o Plan	2027 with Plan
Sales	485,770,398.45	519,390,121.19
Cost	306,096,740.52	337,252,464.05
Cost to Sales Ratio	63.01%	64.93%

Table #25. Comparative Cost Analysis

Due to the year ending in a net loss, calculating for the ROI would yield negative results as well. To further back up this marketing plan, the table above shows the cost-to-sales ratio. Even with the implementation, the difference between the Cost to Sales ratios is minimal. This proves that these additional costs also act as an investment to increase sales which would help Mossimo to generate more revenue in the upcoming year, ultimately reversing the declining trend of its Net Income.

X. Evaluation of Results

Activity	Key Performance Indicator
Product development and Innovation Program	
Mossimo's Adaptive Fit Collection	Innovation Feedback, Product Return Rate, and Repeat Purchase Rate
Sales and Distribution Program	
Physical Touchpoint	Conversion Rate and Sales per Square Foot
Digital Touchpoint	Click-Through Rate and Cart Abandonment Rate
Marketing Communication Program	
Awareness	
Out-of-Home Media (OOH)	Estimated Impressions and Brand Recall
Static Posts	Reach, Impressions, and Profile Visits
Broadcast Media	Gross Rating Points and Search Volume Increases
Interest	
Short Form Videos	Average Watch Time, Save, and Shares

Broadcast Media	Brand Recall and
Public Relations Marketing (Influencership and Content Creation)	Engagement Rate per Post, Reach, and Earned Media Value
Desire	
Public Relations Marketing (Celebrity Collaborations)	Collection Sell-Through Rate and Engagement Rate on Ambassador Content
Local Artist Collaboration	Sell-Through Rate and New Customer Acquisition Rate
Action	
Year-Round Clearance Rack	Attach Rate and Inventory Age Reduction
Events Marketing (Pop-Up Activation Booth (Mossimo's Urban Oasis))	On-Site Conversion Rate and Foot Traffic
Events Marketing (Digital Showcase (Rhythm of the City))	UGC Participation Rate and Conversion Rate
Events Marketing (Premium Night Market & Experiential Event (Manila Soul))	Average Transaction Value and Customer Loyalty Participation
